COMP547

DEEP UNSUPERVISED LEARNING

Lecture #14 – Pretraining for Vision and Language

KOÇ UNIVERSITY

Aykut Erdem // Koç University // Spring 2021

Previously on COMP547

- Motivation and Intro
- Introduction to Language Models
- History of Neural Language Models
- A digression into Transformers
- Beyond standard LMs
- Why we need Unsupervised Learning

Lecture overview

- Introduction
- Pre-training Data
- Feature Representations for Vision and Language
- Model Architectures
- Pre-training Tasks
- Downstream Tasks
- Moving Forward

Disclaimer: Much of the material and slides for this lecture were borrowed from

—Licheng Yu, Yen-Chun Chen, Linjie Li's tutorial on "Self-Supervised Learning for Vision-and-Text"

Lecture overview

- **Introduction**
- Pre-training Data
- Feature Representations for Vision and Language
- Model Architectures
- Pre-training Tasks
- Downstream Tasks
- Moving Forward

Nowadays Machine Learning

Nowadays Machine Learning

Datasets + Labels

Instructions:

- Describe all the important parts of the scene.
- Do not start the sentences with "There is".
- Do not describe unimportant details.
- Do not describe things that might have happened in the future or past.
- Do not describe what a person might say.
- Do not give people proper names.
- The sentence should contain at least 8 words.

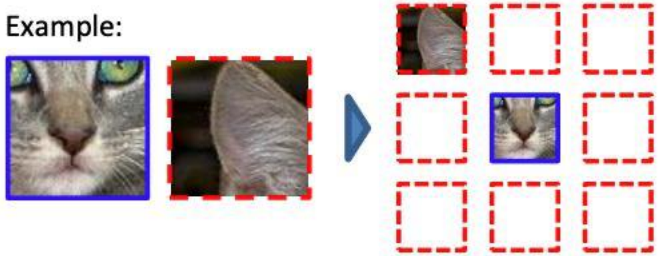
Please describe the image:

Enter description here

prev next

- MS COCO’s Image Captioning:
  - 120,000 images
  - 5 sentences / image
  - 15 cents / sentence
  - +20% AWS processing fee

$108,000



~~Labels~~: Self-Supervised Learning for Vision

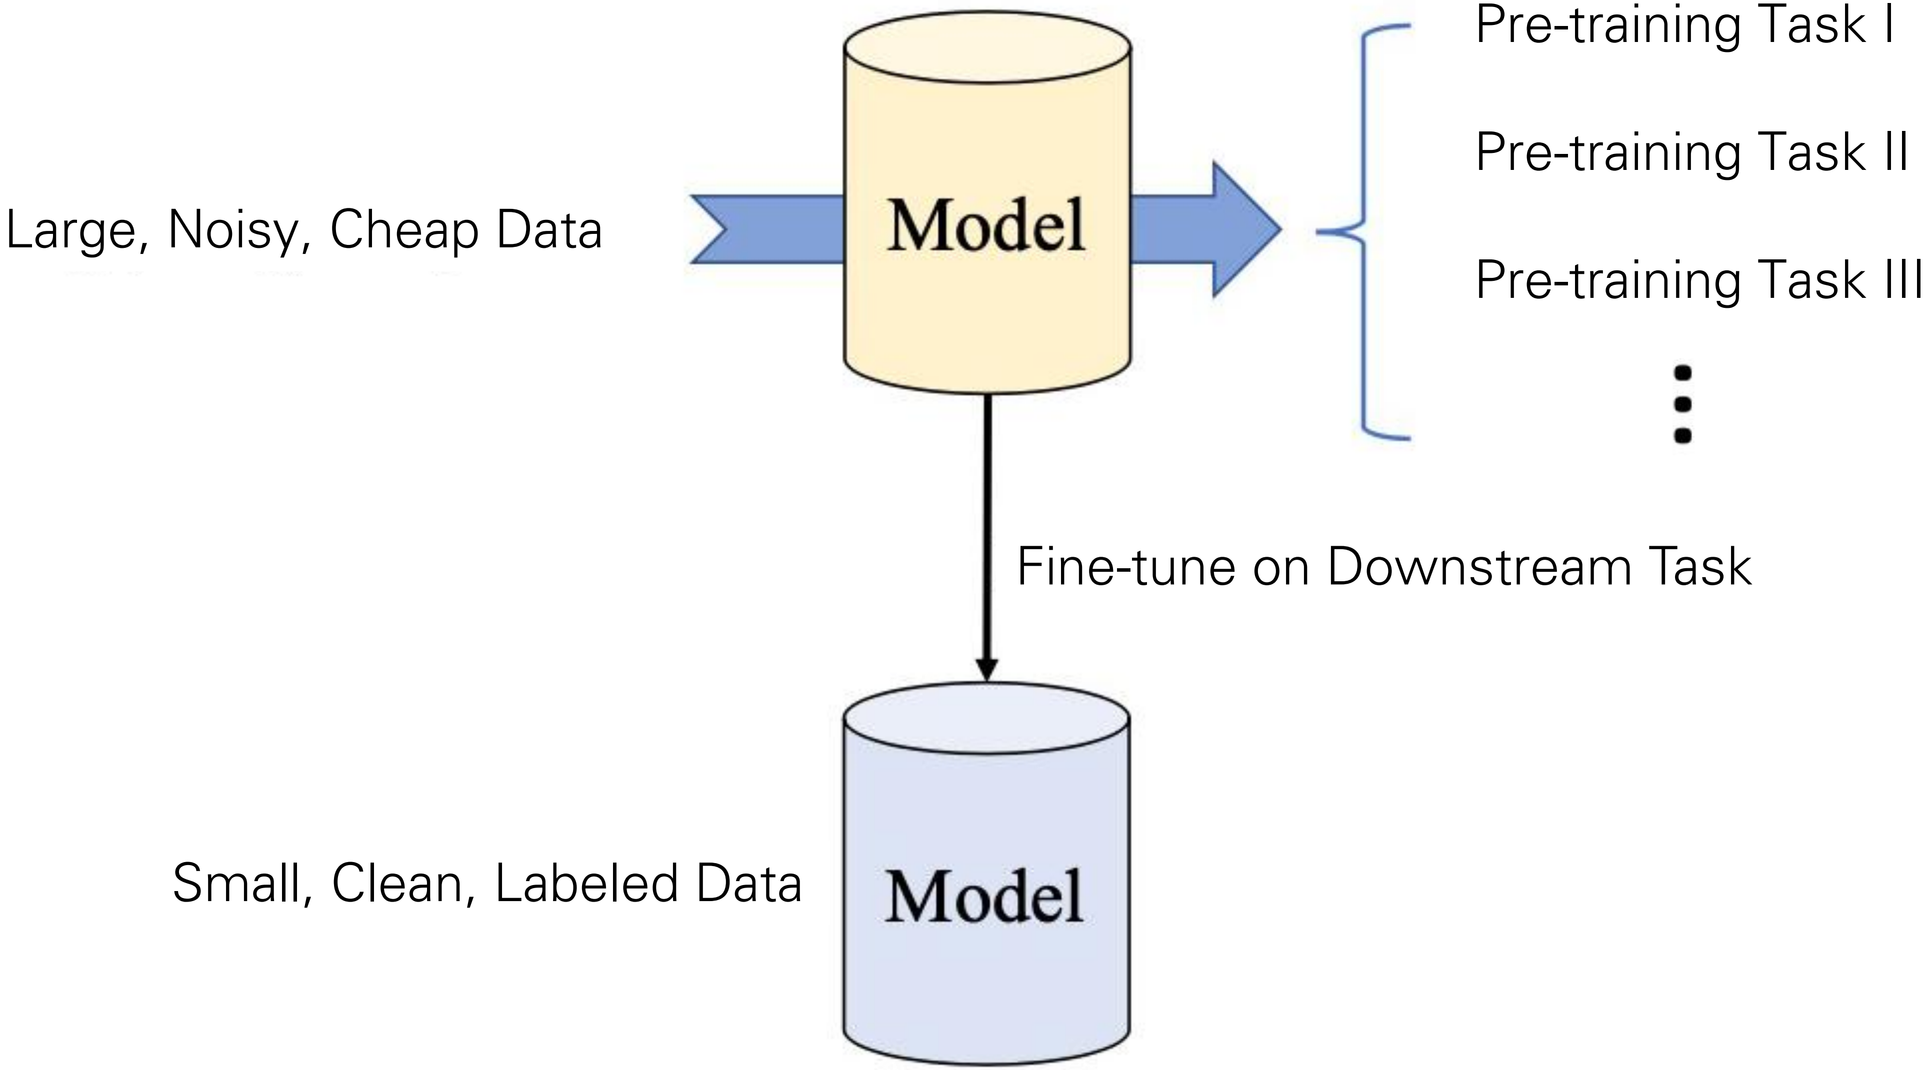
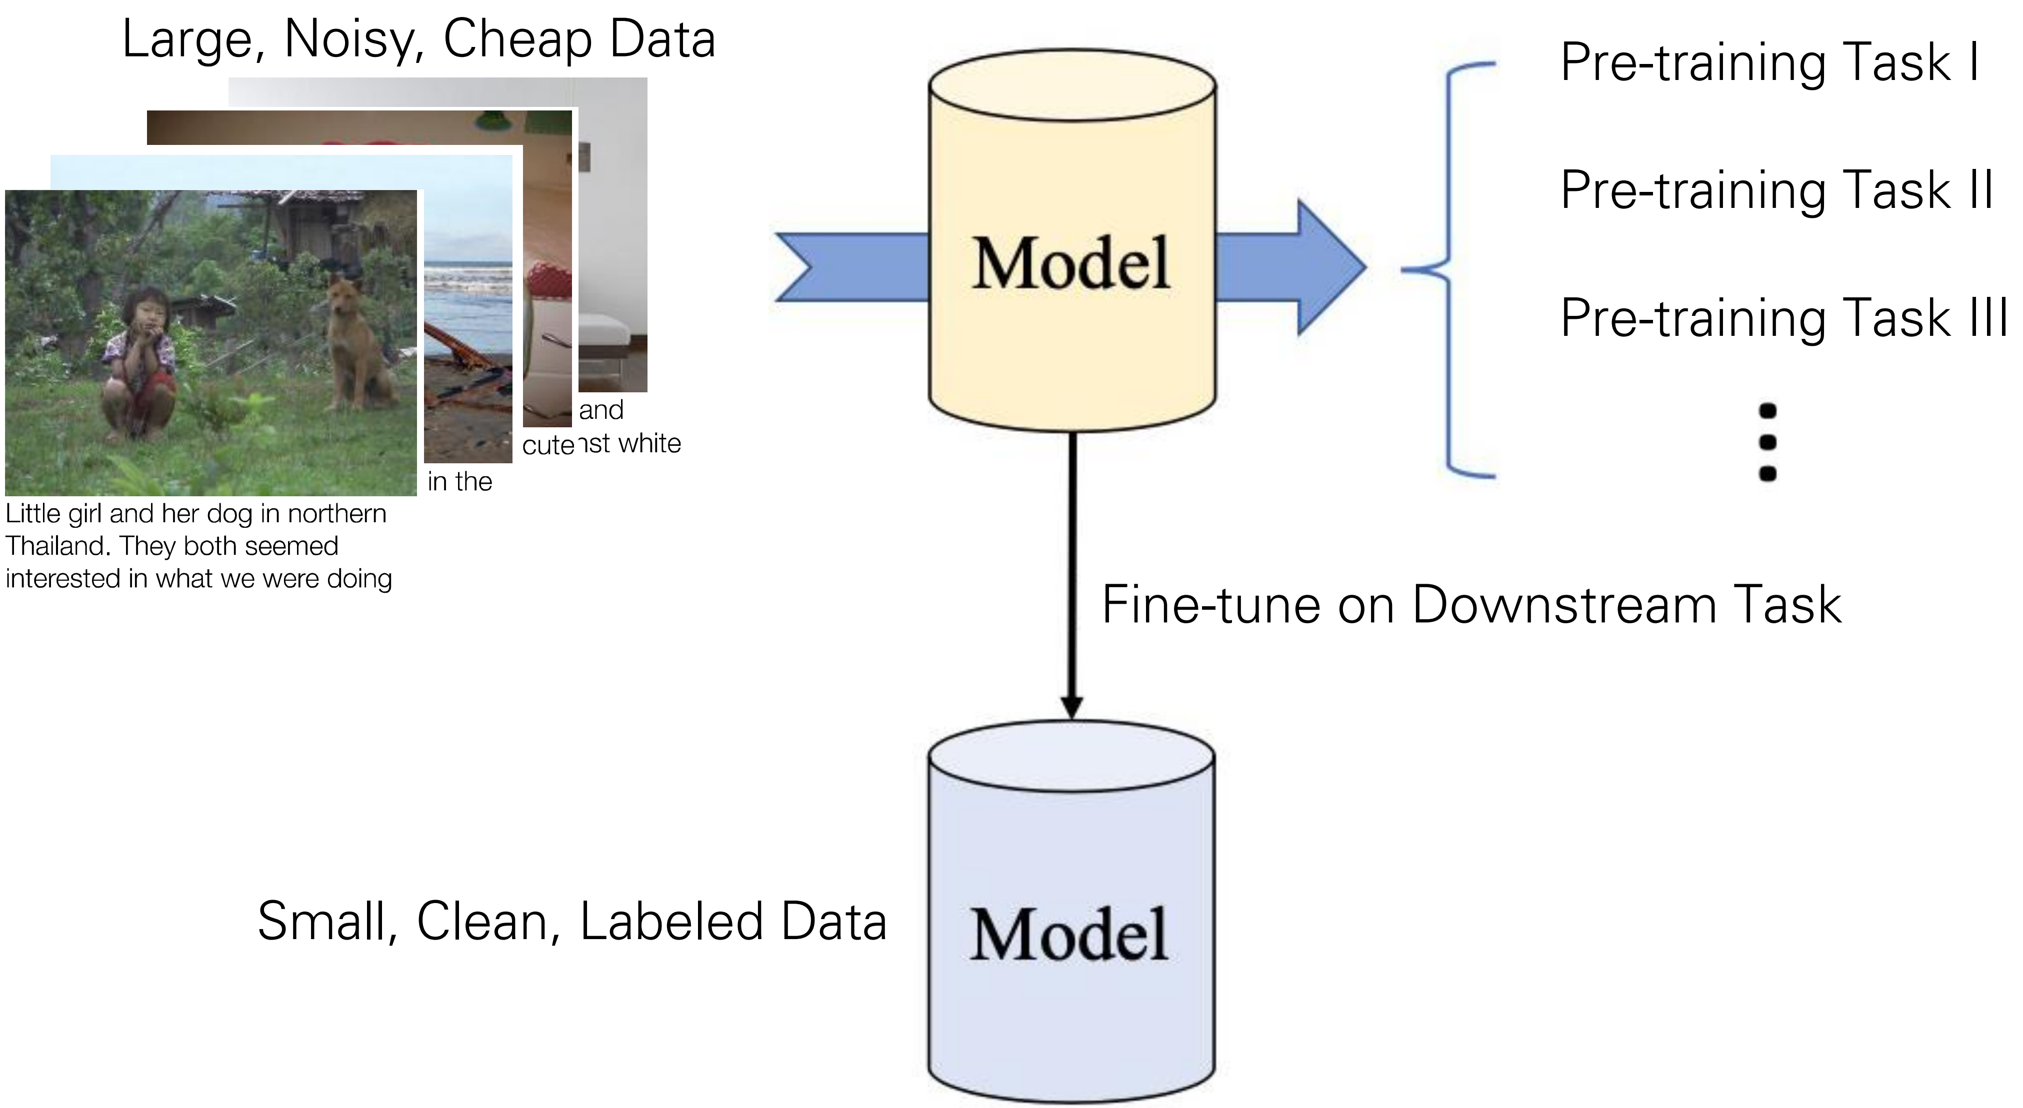
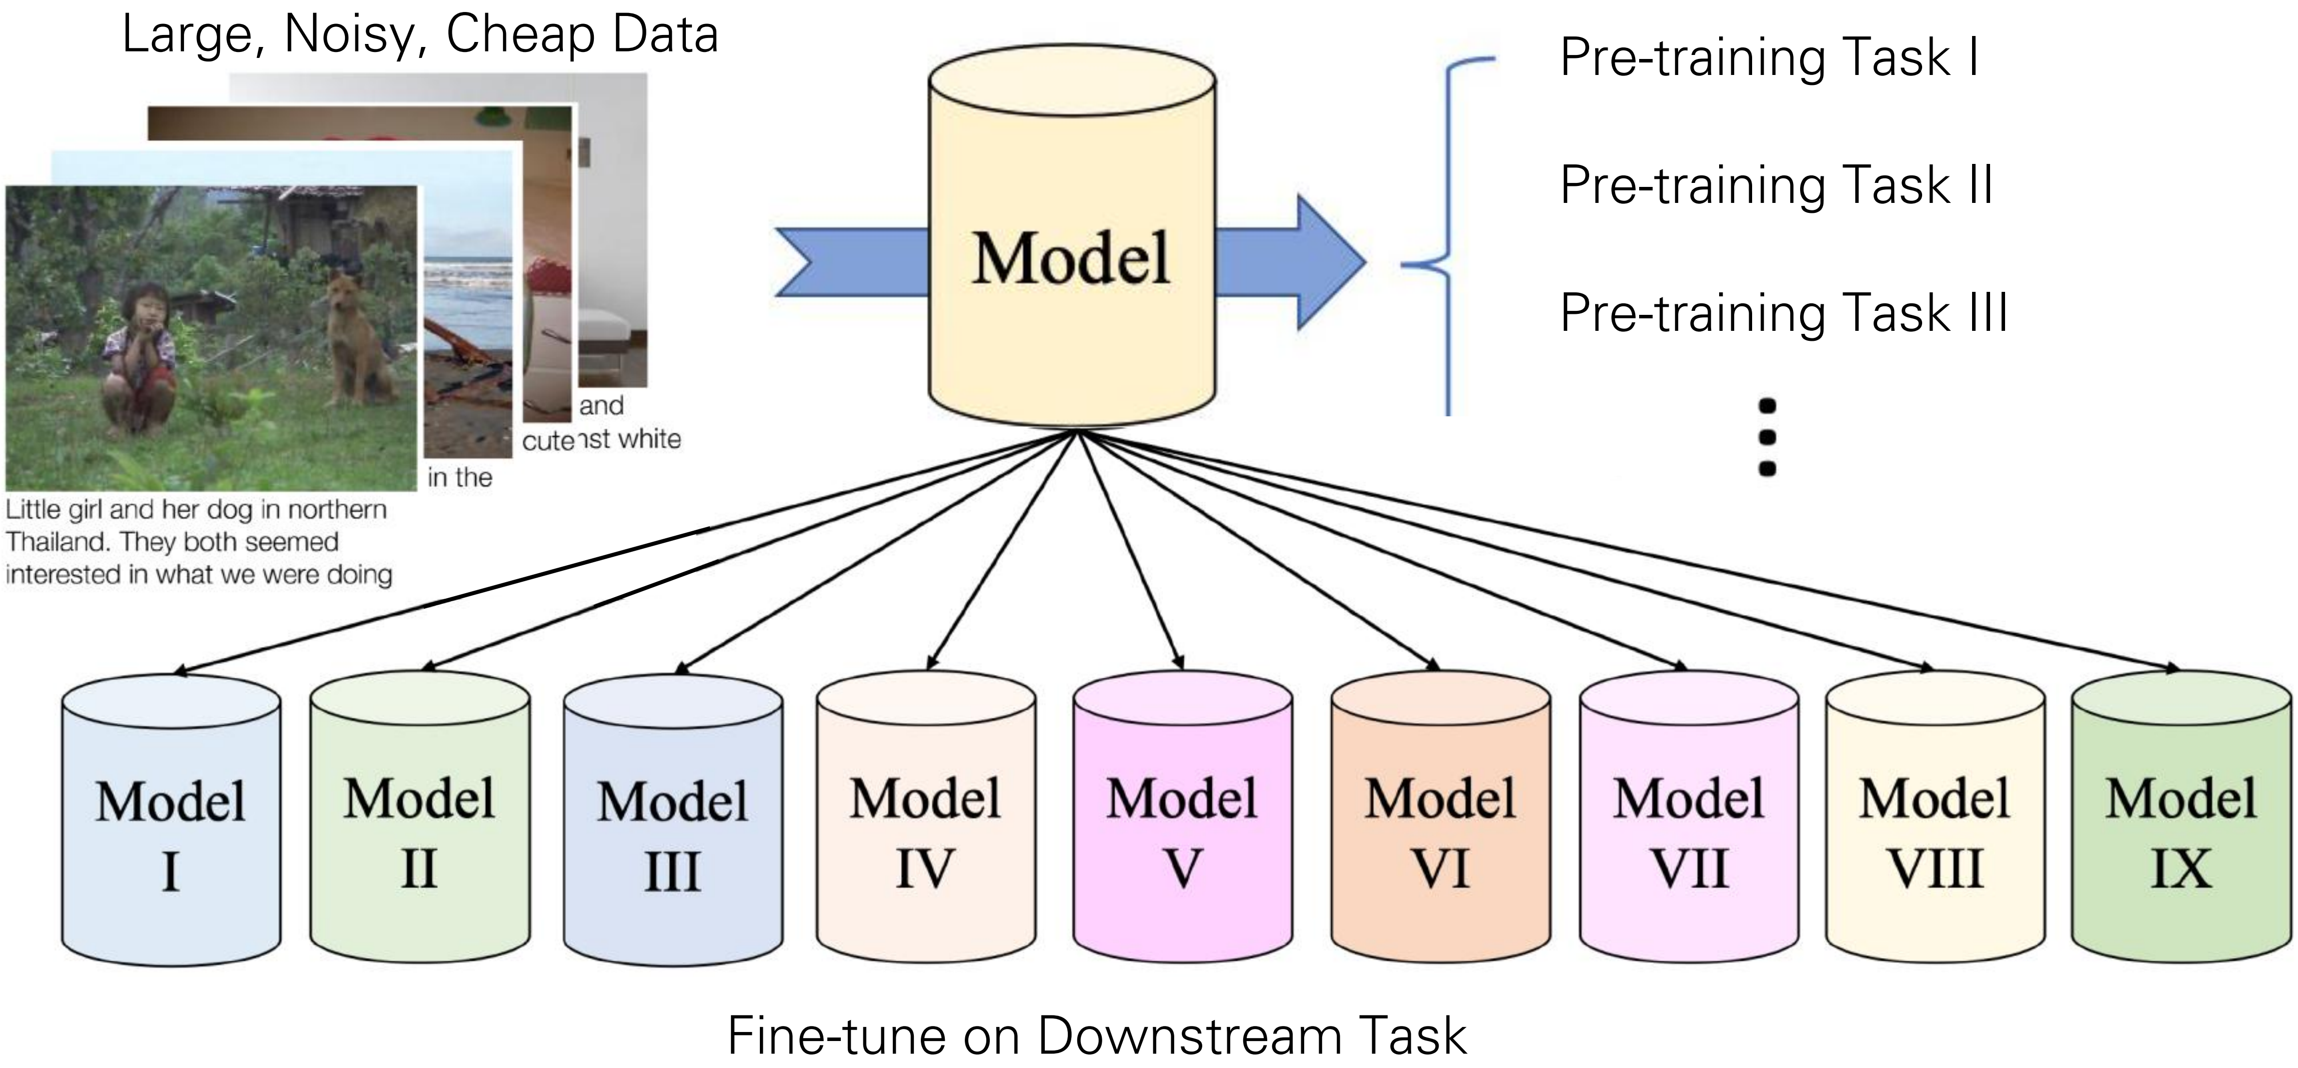
Pre-training + Finetuning

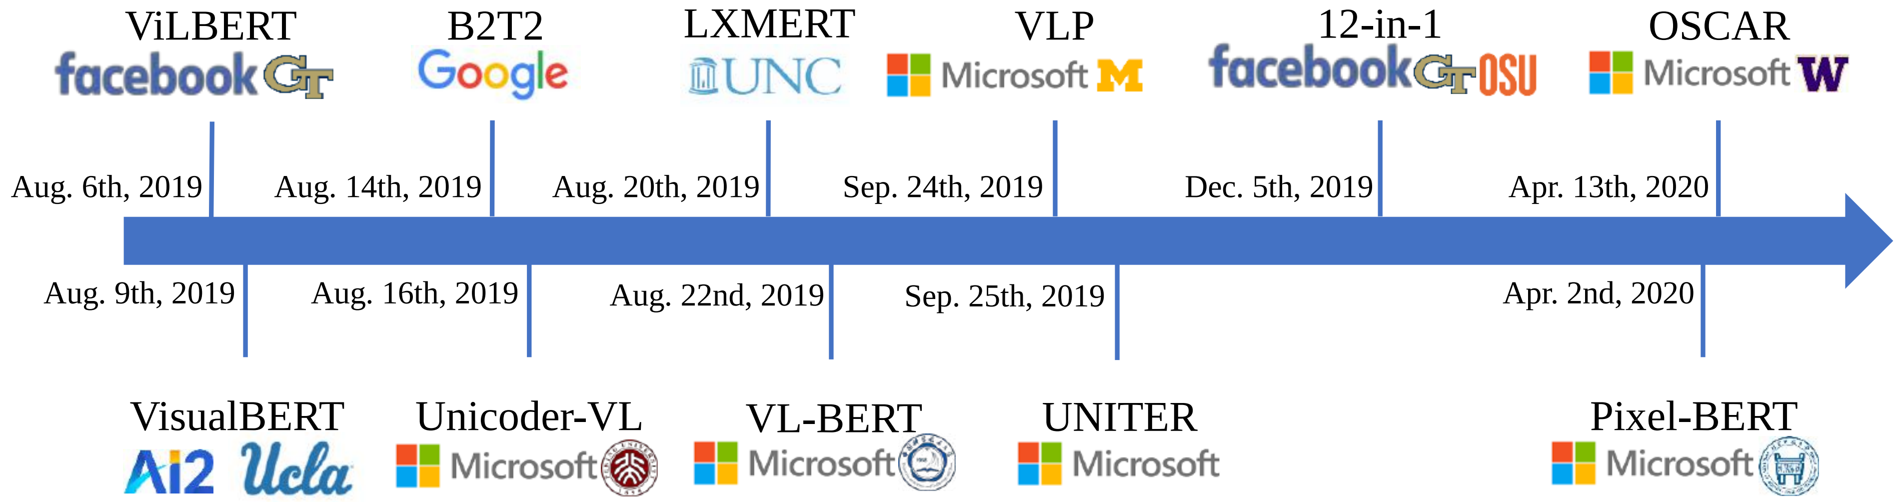


Two-Stage Training Pipeline



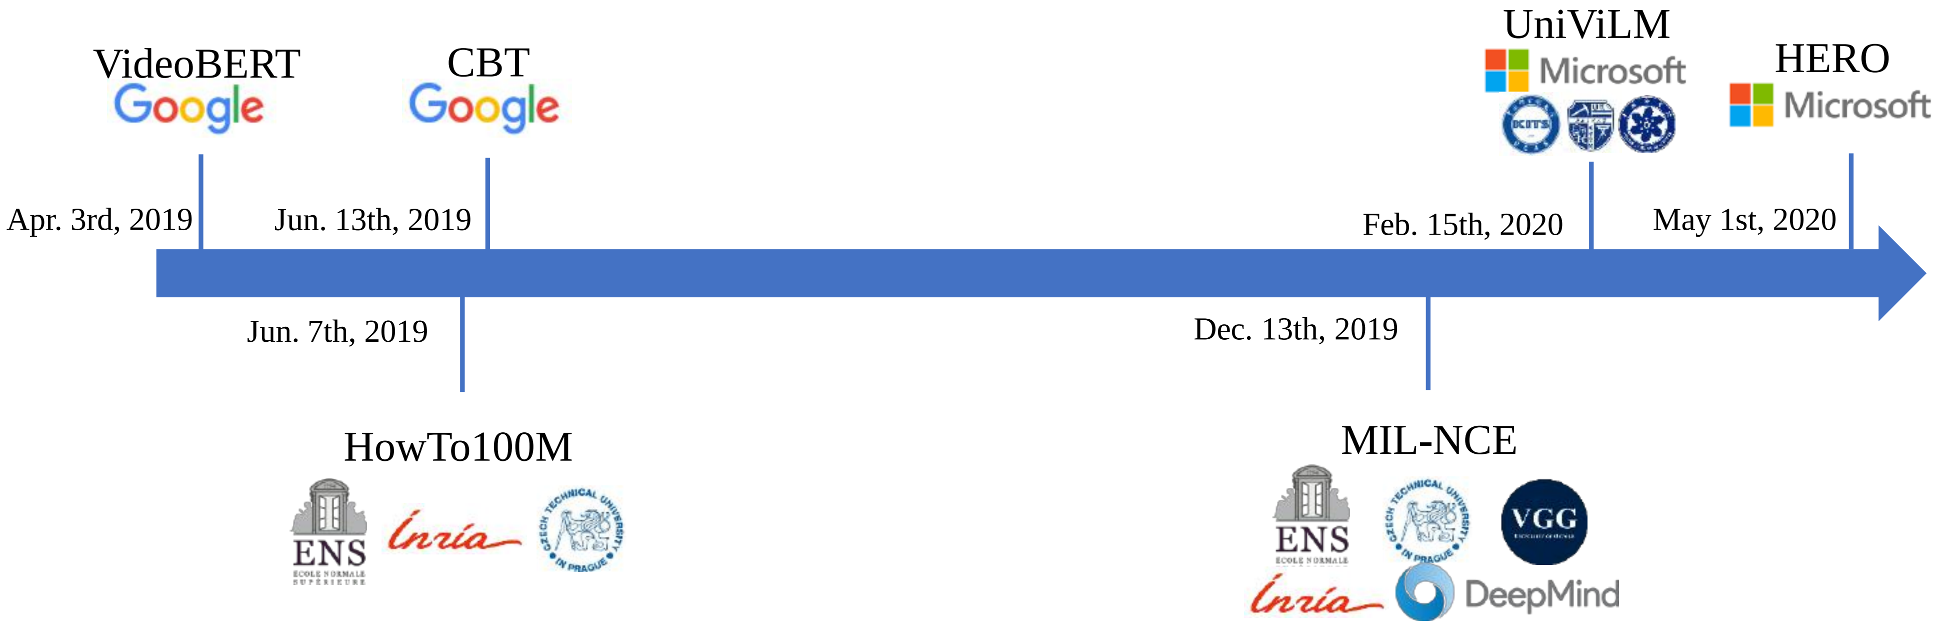
Generalization





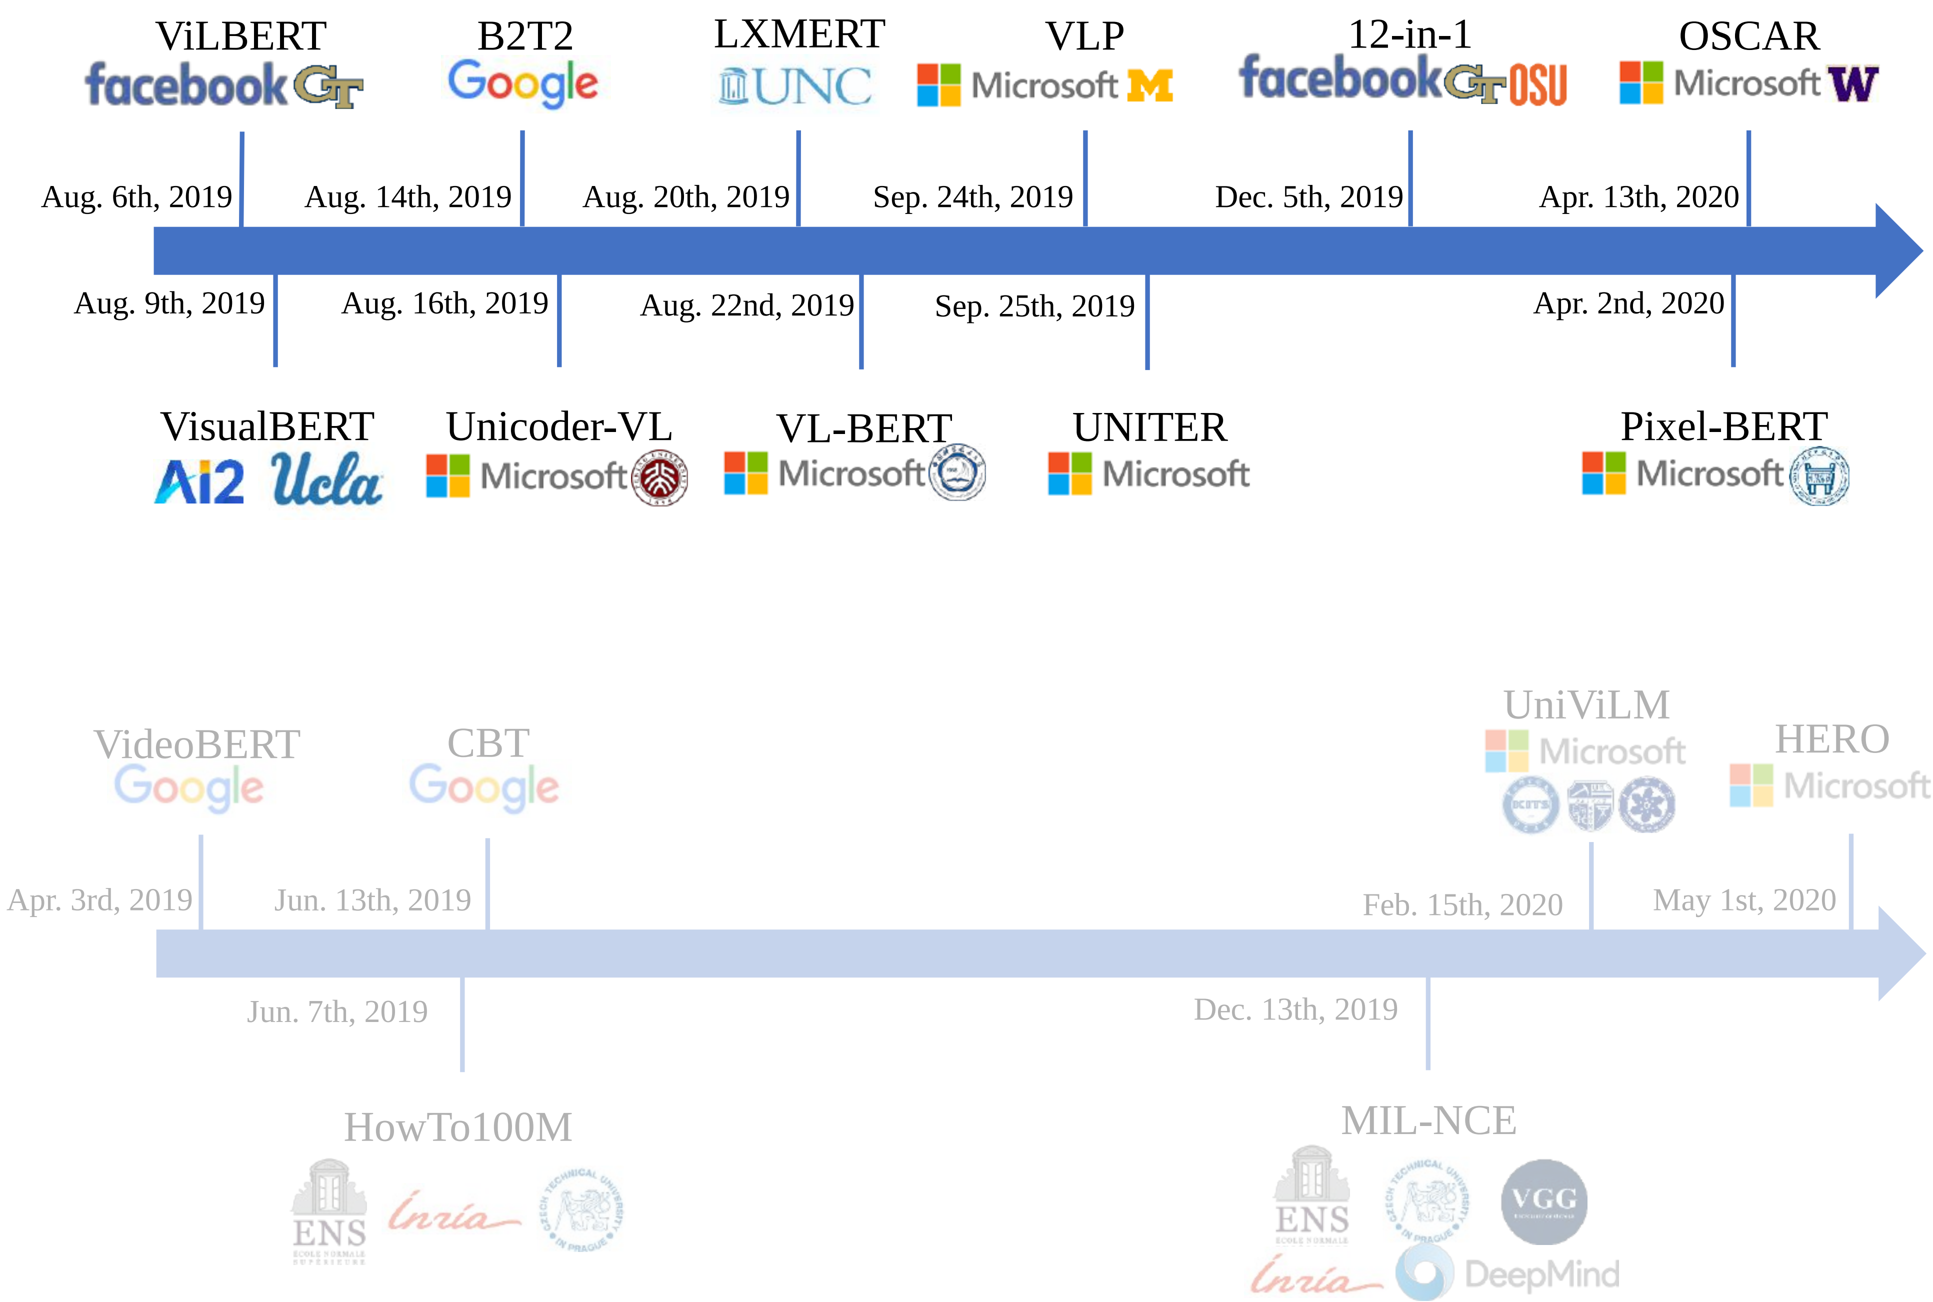
Downstream Tasks

- VQA
- VCR
- NLVR2
- Visual Entailment
- Referring Expressions
- Image-Text Retrieval
- Image Captioning



Downstream Tasks

- Video QA
- Video-and-Language Inference
- Video Captioning
- Video Moment Retrieval



Downstream Tasks

- VQA
- VCR
- NLVR2
- Visual Entailment
- Referring Expressions
- Image-Text Retrieval
- Image Captioning

Downstream Tasks

- Video QA
- Video-and-Language Inference
- Video Captioning
- Video Moment Retrieval

- Moving Forward

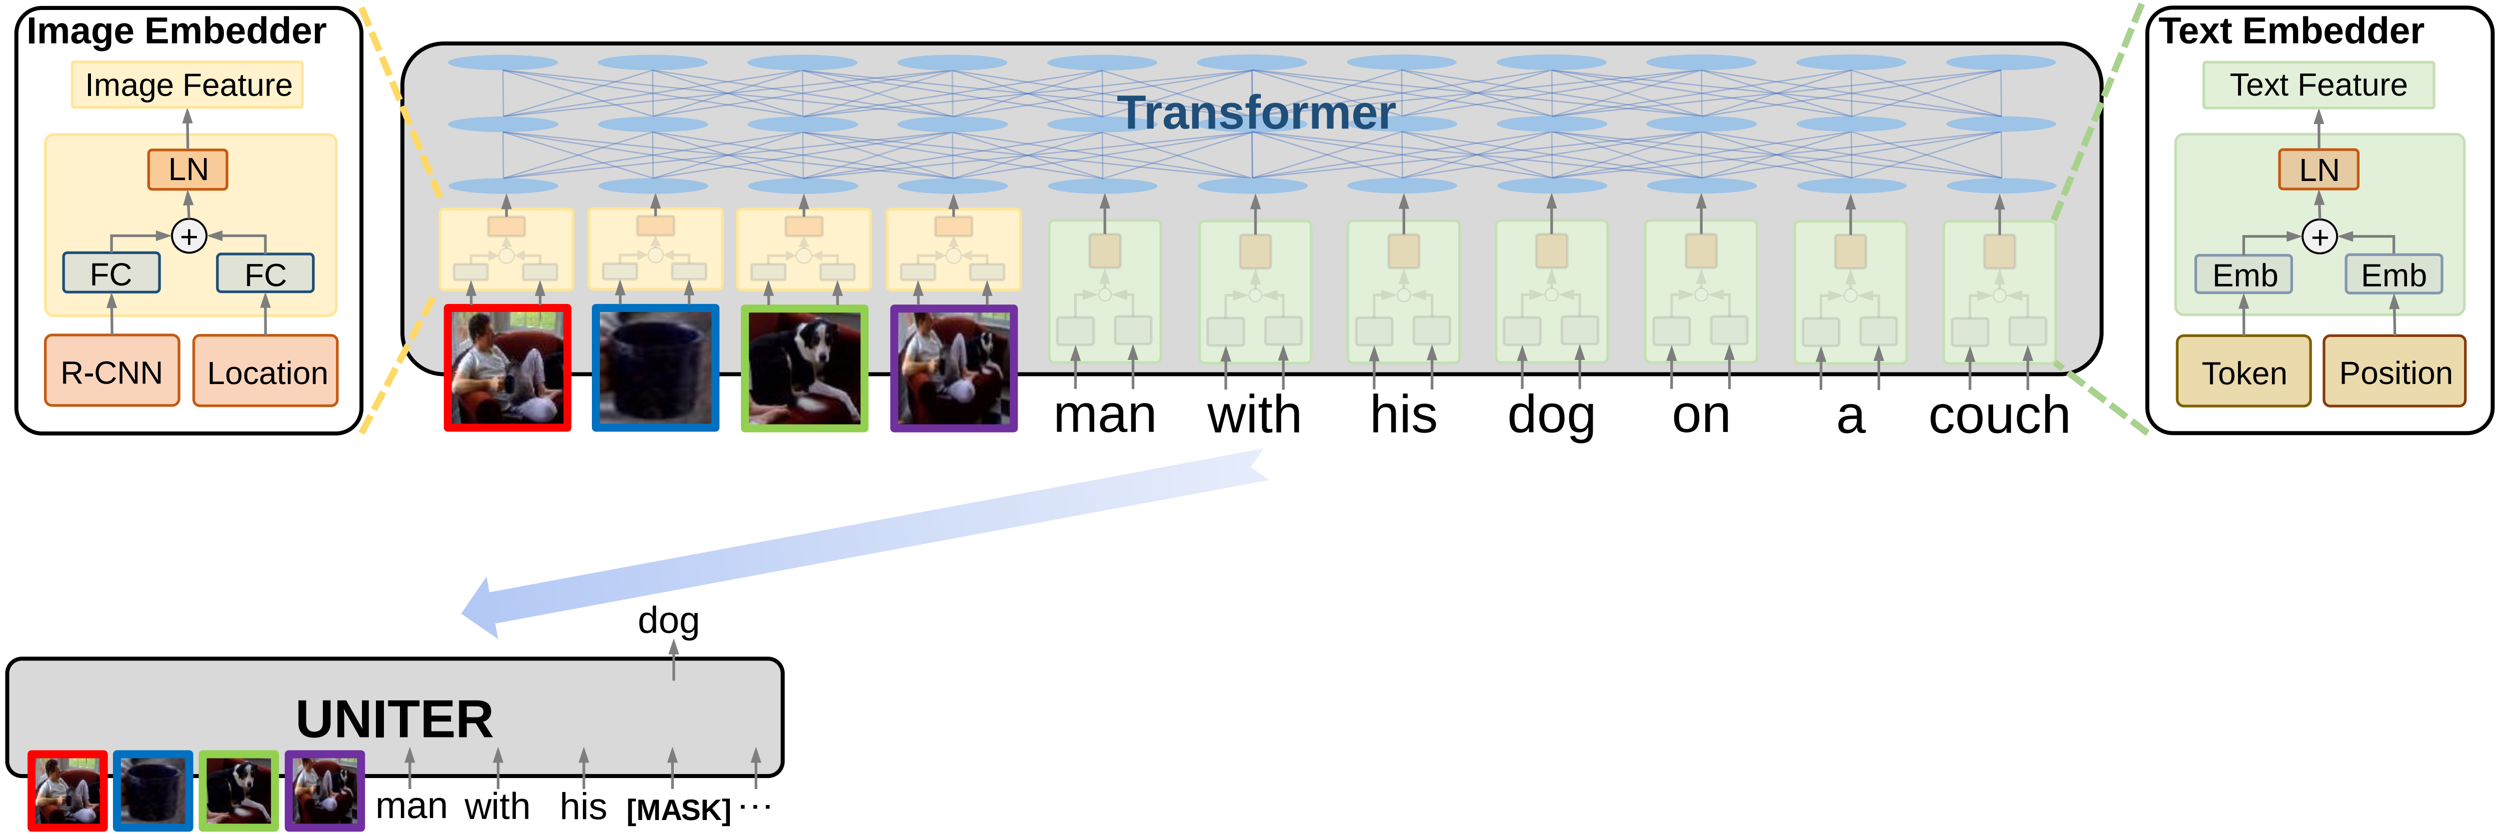
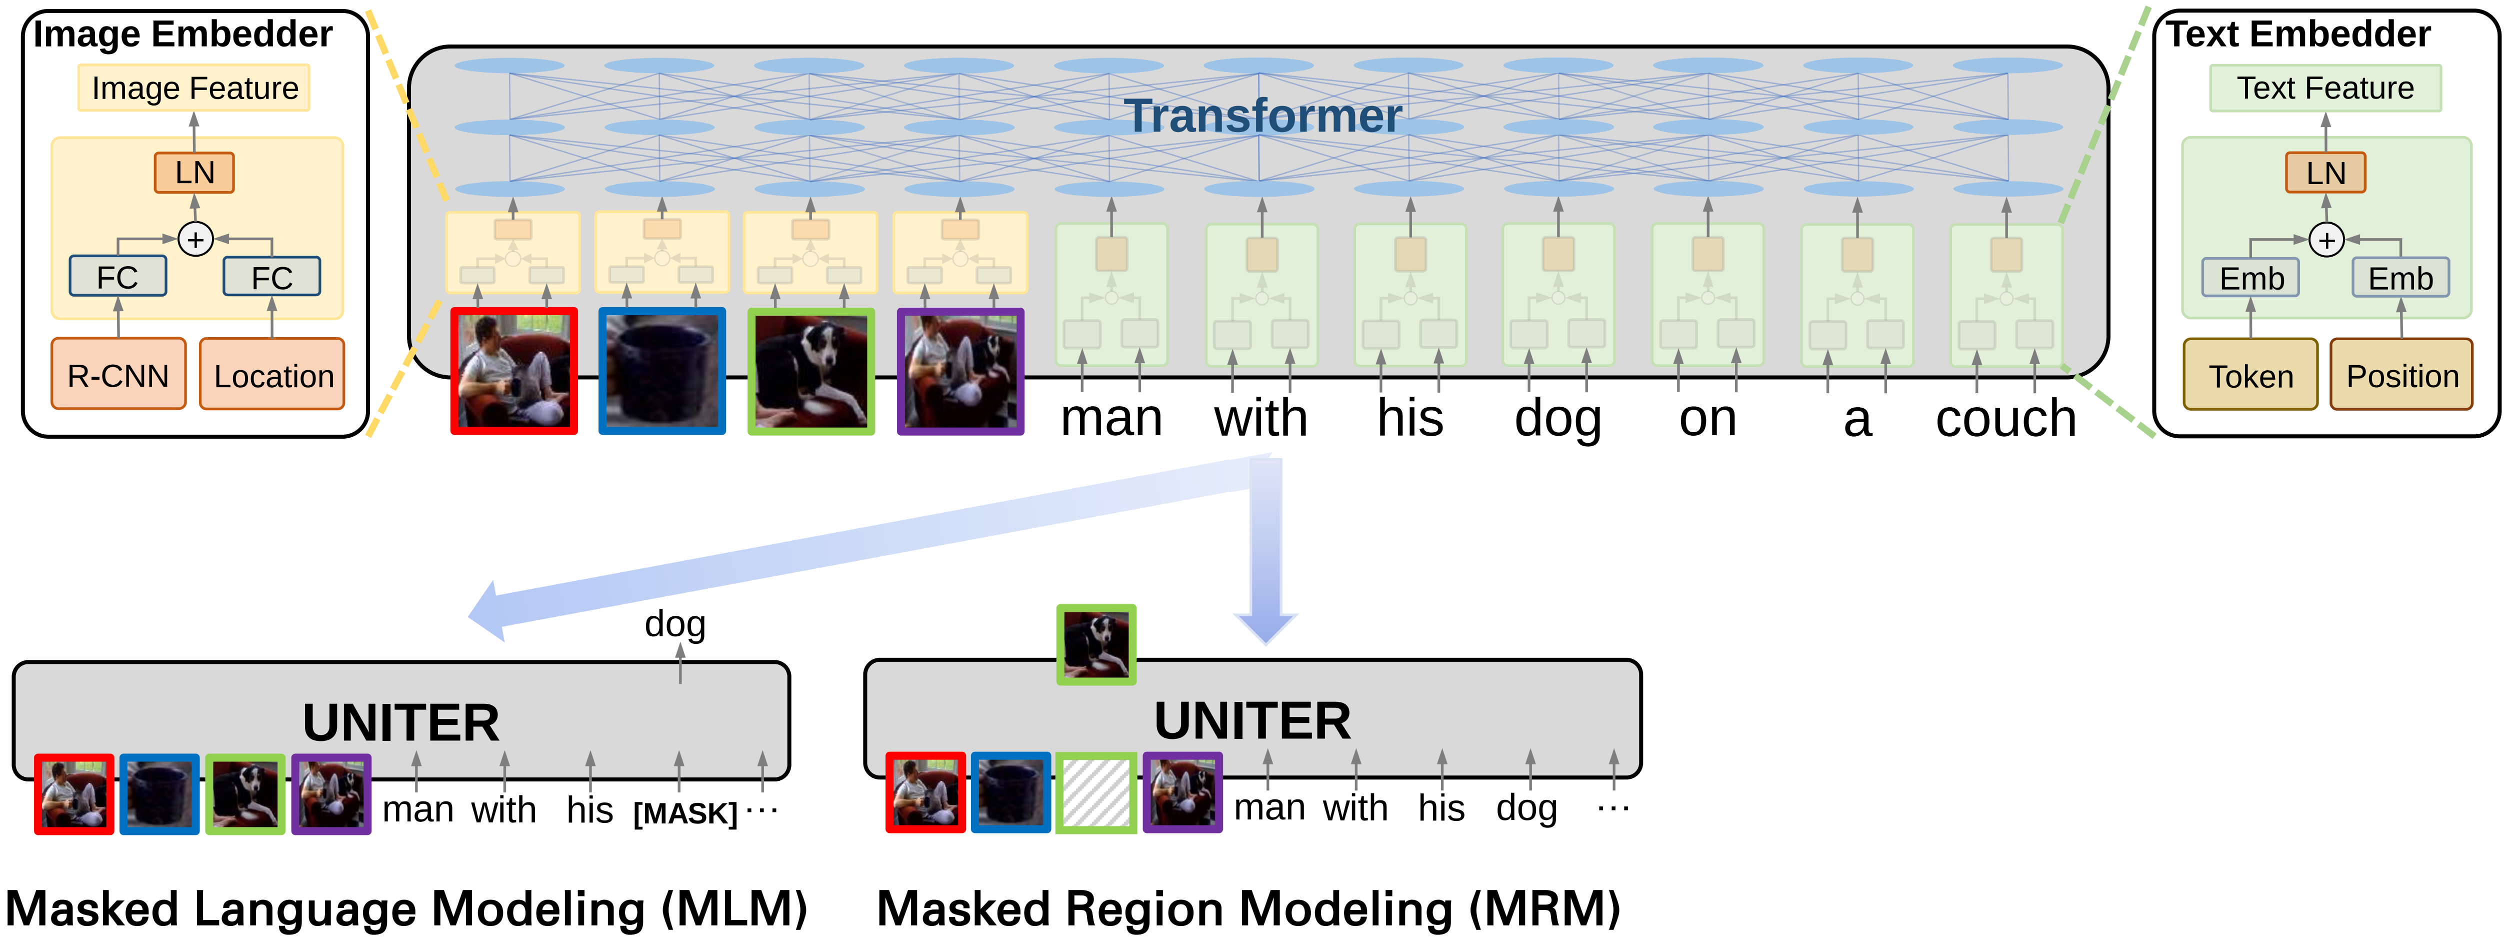
Pretraining Tasks



Masked Language Modeling (MLM)

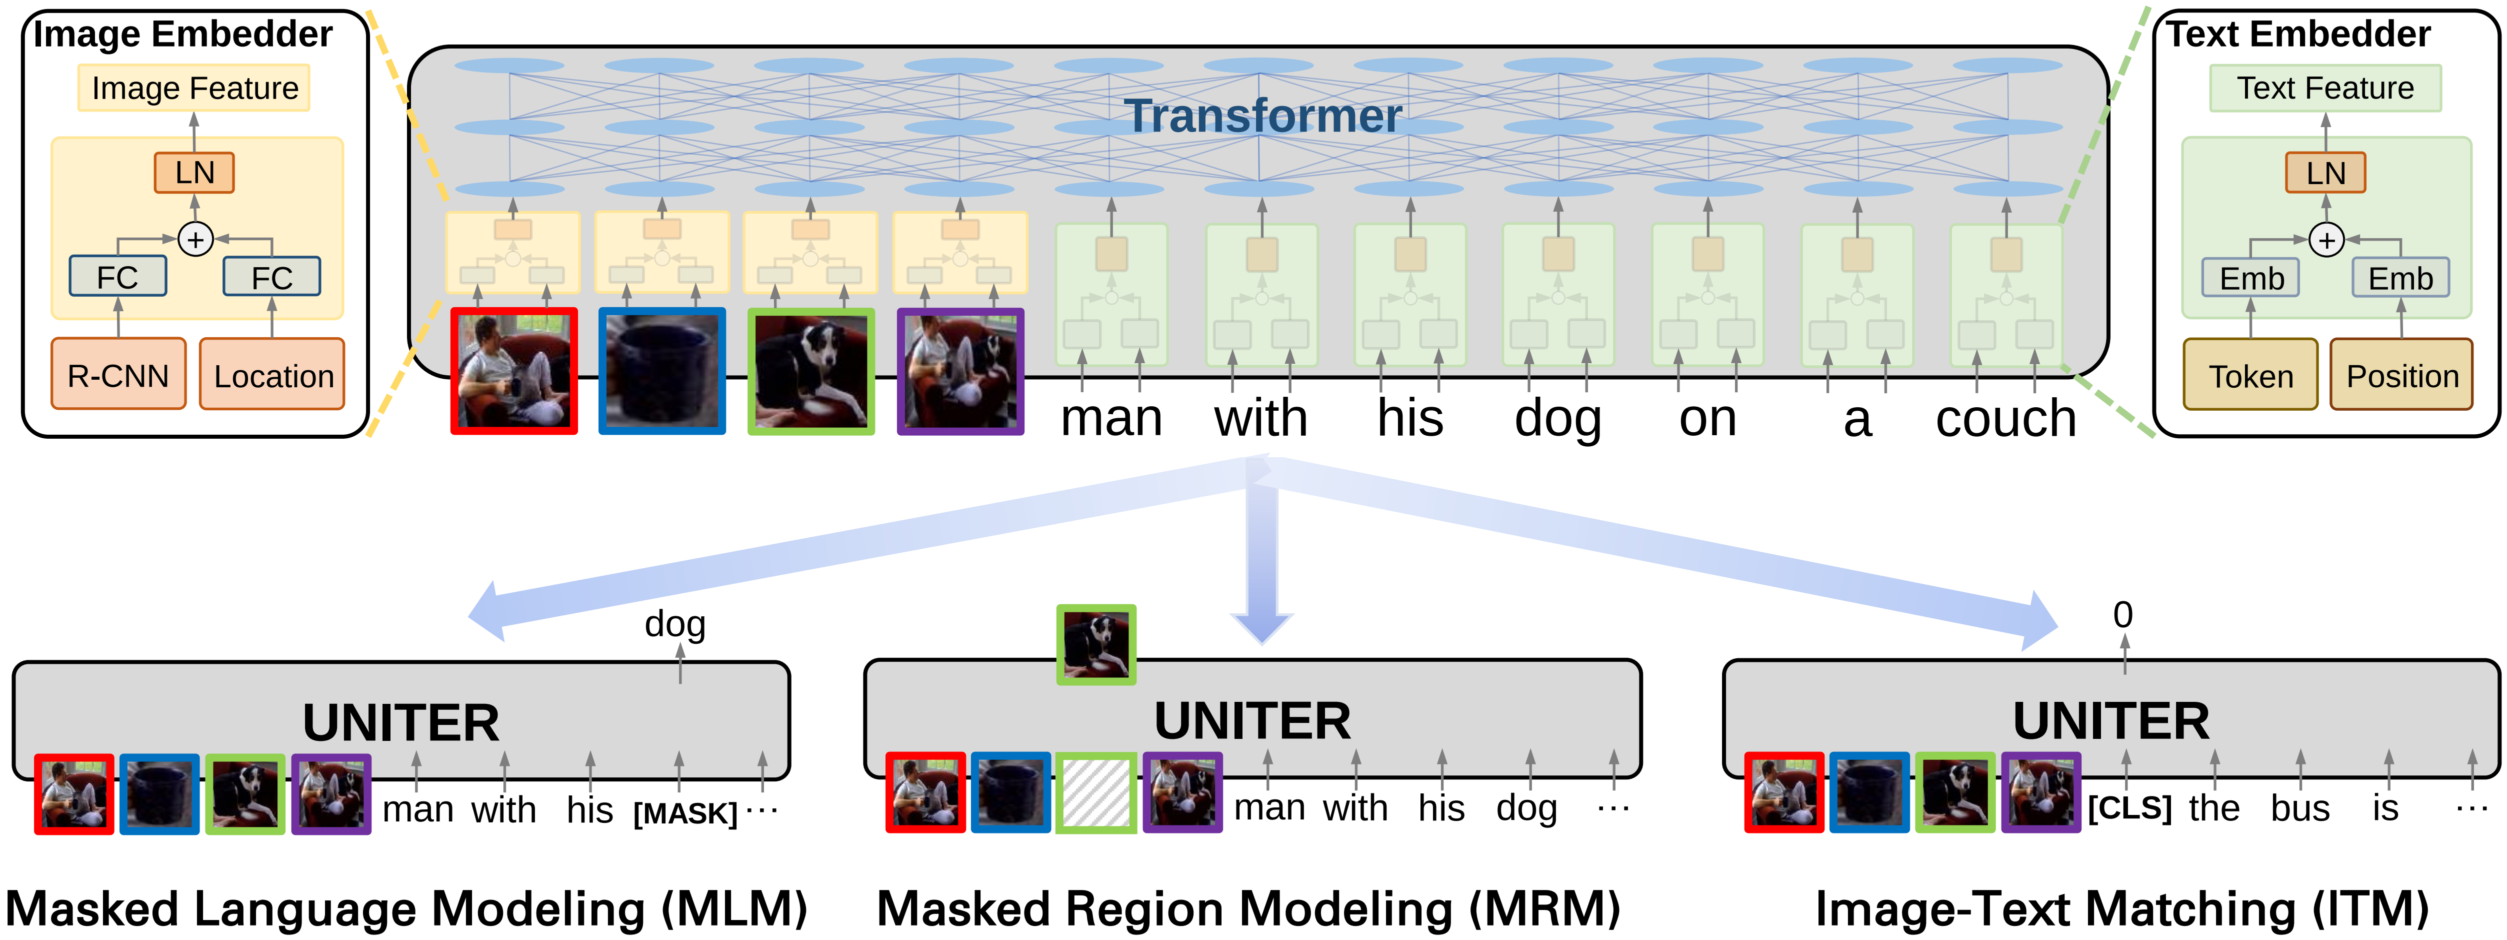
[UNITER; Chen et al., 2019]

Pretraining Tasks



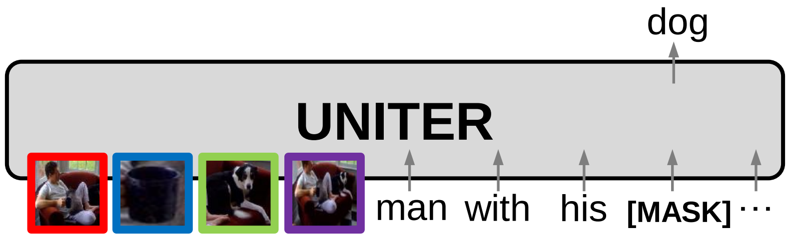
[UNITER; Chen et al., 2019]

Pretraining Tasks



[UNITER; Chen et al., 2019]

Pretraining Tasks



Masked Language Modeling (MLM)

Image Regions: $\mathbf{v} = \{v_1, ..., v_K\}$

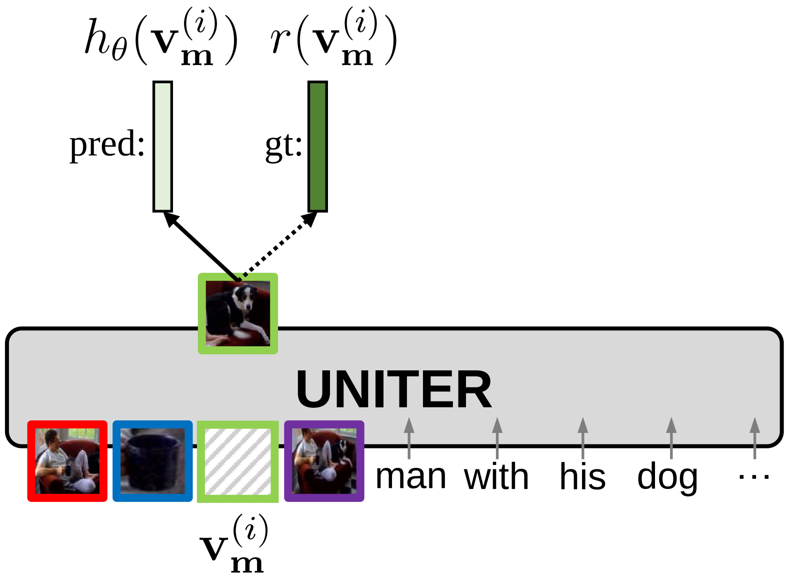
Sentence Tokens: $\mathbf{w} = \{w_1, ..., w_T\}$

Masking Indices: $\mathbf{m} \in \mathbb{N}^M$

Loss Function of Masked Language Modeling (MLM):

$$\mathcal{L}_{\mathrm{MLM}}(\theta) = -E_{(\mathbf{w},\mathbf{v})\sim D} \log P_\theta(\mathbf{w_m}|\mathbf{w_{\backslash m}}, \mathbf{v}).$$

Pretraining Tasks



Masked Region Modeling (MRM)

Image Regions: $\mathbf{v} = \{v_1, ..., v_K\}$

Sentence Tokens: $\mathbf{w} = \{w_1, ..., w_T\}$

Masking Indices: $\mathbf{m} \in \mathbb{N}^M$

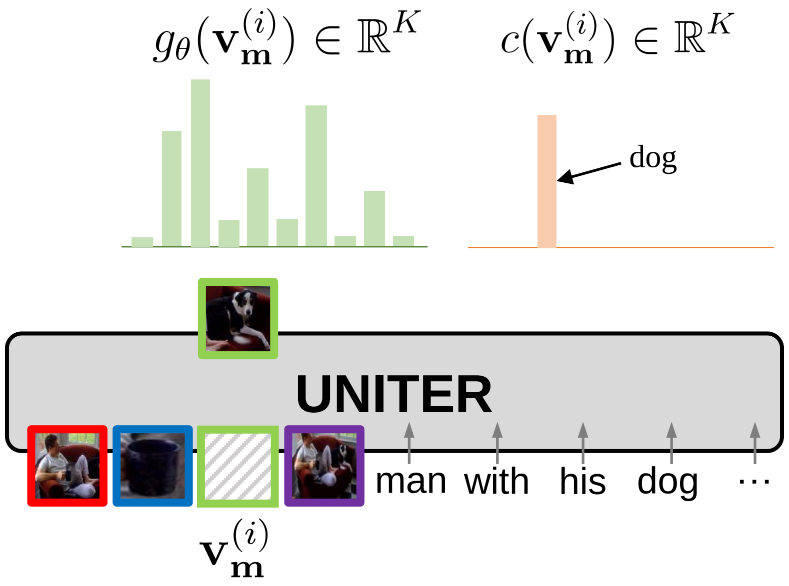
Loss Function of Masked Language Modeling (MLM):

$$\mathcal{L}_{\text{MLM}}(\theta) = -E_{(\mathbf{w},\mathbf{v})\sim D} \log P_\theta(\mathbf{w_m}|\mathbf{w}_{\backslash\mathbf{m}}, \mathbf{v}).$$

1) Objective of **Masked Region Feature Regression (MRFR)**

$$f_\theta(\mathbf{v_m}|\mathbf{v}_{\backslash\mathbf{m}}, \mathbf{w}) = \sum_{i=1}^{M} \|h_\theta(\mathbf{v}_\mathbf{m}^{(i)}) - r(\mathbf{v}_\mathbf{m}^{(i)})\|_2^2$$

Pretraining Tasks



Masked Region Modeling (MRM)

Image Regions: $\mathbf{v} = \{v_1, ..., v_K\}$

Sentence Tokens: $\mathbf{w} = \{w_1, ..., w_T\}$

Masking Indices: $\mathbf{m} \in \mathbb{N}^M$

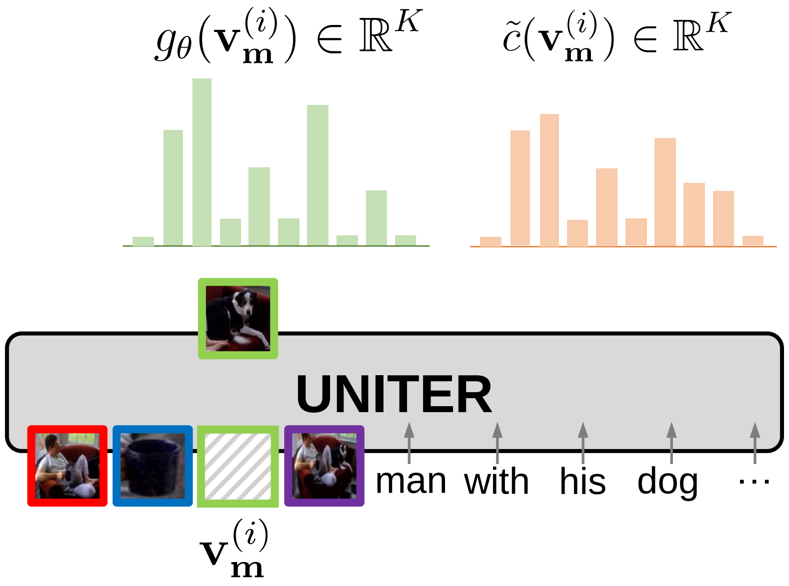
Loss Function of Masked Language Modeling (MLM):

$$\mathcal{L}_{\mathrm{MLM}}(\theta) = -E_{(\mathbf{w},\mathbf{v})\sim D} \log P_\theta(\mathbf{w}_\mathbf{m}|\mathbf{w}_{\backslash\mathbf{m}}, \mathbf{v}).$$

2) Objective of **<u>Masked Region Classification (MRC)</u>**

$$f_\theta(\mathbf{v}_\mathbf{m}|\mathbf{v}_{\backslash\mathbf{m}}, \mathbf{w}) = \sum_{i=1}^{M} \mathrm{CE}(c(\mathbf{v}_\mathbf{m}^{(i)}), g_\theta(\mathbf{v}_\mathbf{m}^{(i)}))$$

Pretraining Tasks



Masked Region Modeling (MRM)

Image Regions: $\mathbf{v} = \{v_1, ..., v_K\}$

Sentence Tokens: $\mathbf{w} = \{w_1, ..., w_T\}$

Masking Indices: $\mathbf{m} \in \mathbb{N}^M$

Loss Function of Masked Language Modeling (MLM):

$$\mathcal{L}_{\text{MLM}}(\theta) = -E_{(\mathbf{w},\mathbf{v})\sim D} \log P_\theta(\mathbf{w_m}|\mathbf{w}_{\backslash\mathbf{m}}, \mathbf{v}).$$

3) Objective of **Masked Region Classification – KL Divergence (MRC-KL)**

$$f_\theta(\mathbf{v_m}|\mathbf{v}_{\backslash\mathbf{m}}, \mathbf{w}) = \sum_{i=1}^{M} D_{KL}(\tilde{c}(\mathbf{v}_\mathbf{m}^{(i)})||g_\theta(\mathbf{v}_\mathbf{m}^{(i)}))$$

Pretraining Tasks

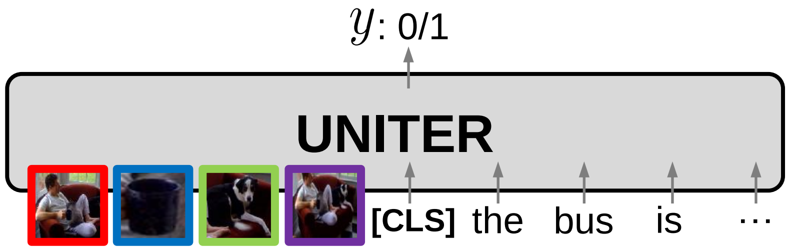


Image-Text Matching (ITM)

Image Regions: $\mathbf{v} = \{v_1, ..., v_K\}$

Sentence Tokens: $\mathbf{w} = \{w_1, ..., w_T\}$

Loss Function of **Image-Text Matching (ITM)**

$$\mathcal{L}_{\mathrm{ITM}}(\theta) = -E_{(\mathbf{w},\mathbf{v})\sim D}[y \log s_\theta(\mathbf{w}, \mathbf{v}) + (1-y)\log(1 - s_\theta(\mathbf{w}, \mathbf{v}))].$$

Pretraining Tasks

- UNITER: Word-Region Alignment
- VLP: Left-to-Right Language Modeling
- 12-in-1: Multi-task Learning
- LXMERT: Multi-task Learning
- OSCAR: Multi-View Alignment (tokens, tags, regions)
- …

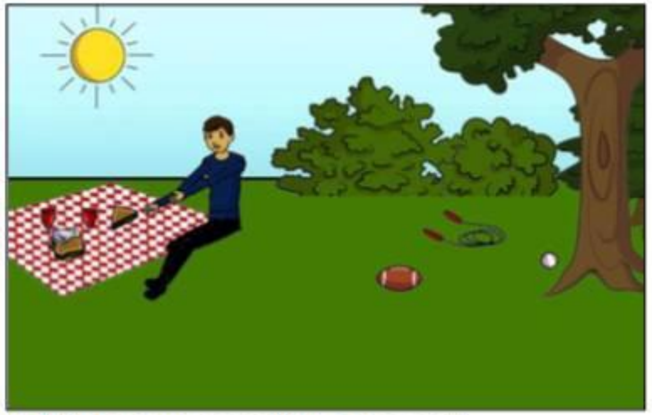
Lecture overview

- Introduction
- Pre-training Data
- Feature Representations for Vision and Language
- Model Architectures
- Pre-training Tasks
- **Downstream Tasks**
- Moving Forward

Downstream Task 1: Visual Question Answering

What color are her eyes?
What is the mustache made of?

How many slices of pizza are there?
Is this a vegetarian pizza?



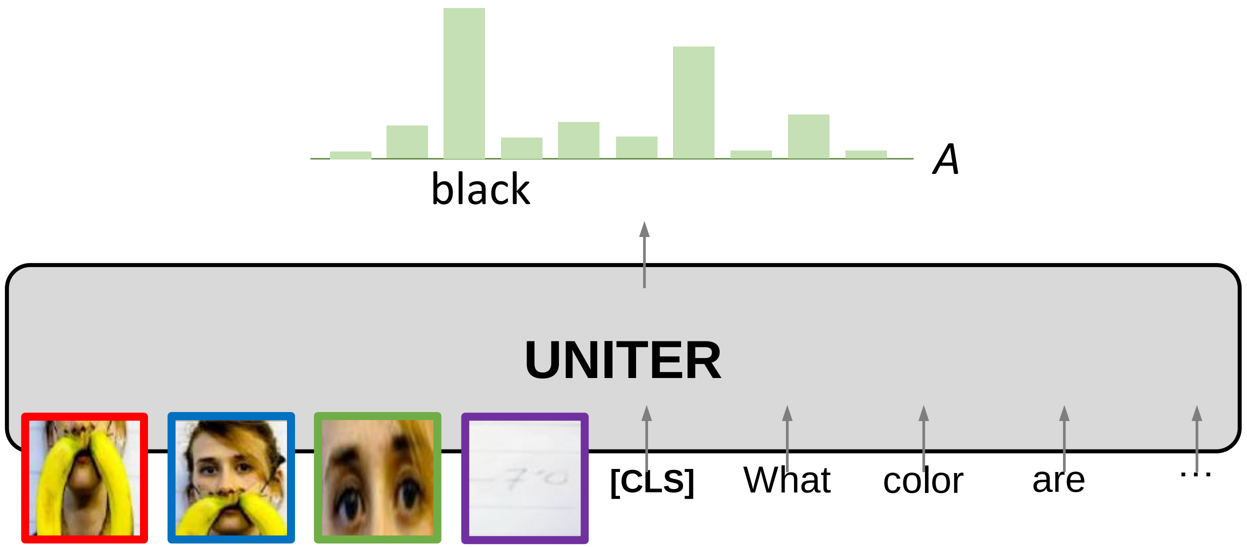
Is this person expecting company?
What is just under the tree?

Does it appear to be rainy?
Does this person have 20/20 vision?

[Antol et al., ICCV 2015]

Downstream Task 1: Visual Question Answering

What color are her eyes?



Downstream Task 2: Visual Entailment

+

- Two woman are holding packages.
- The sisters are hugging goodbye while holding to go packages after just eating lunch.
- The men are fighting outside a deli.

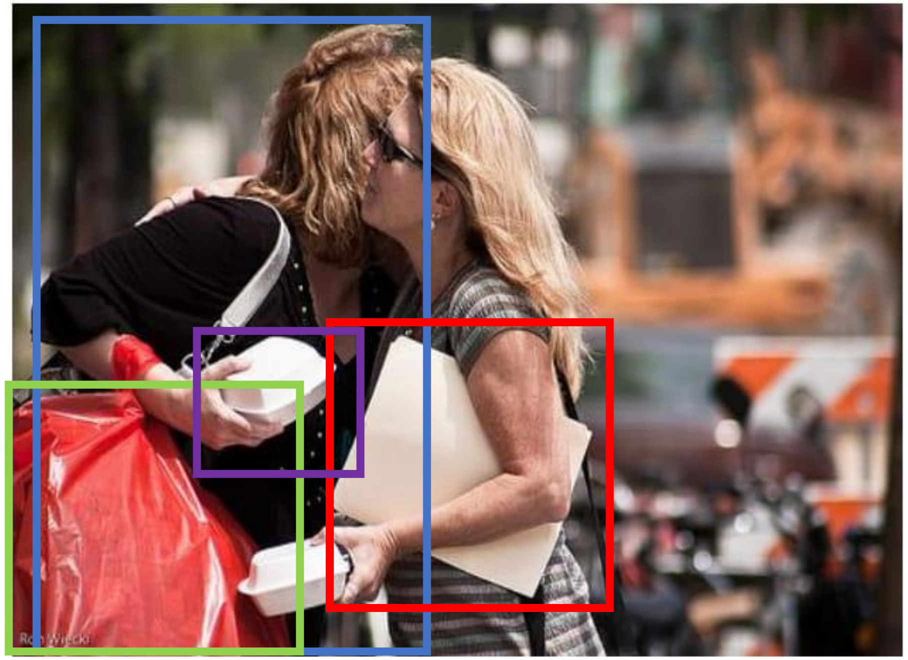
=

- Entailment
- Neutral
- **Contradiction**

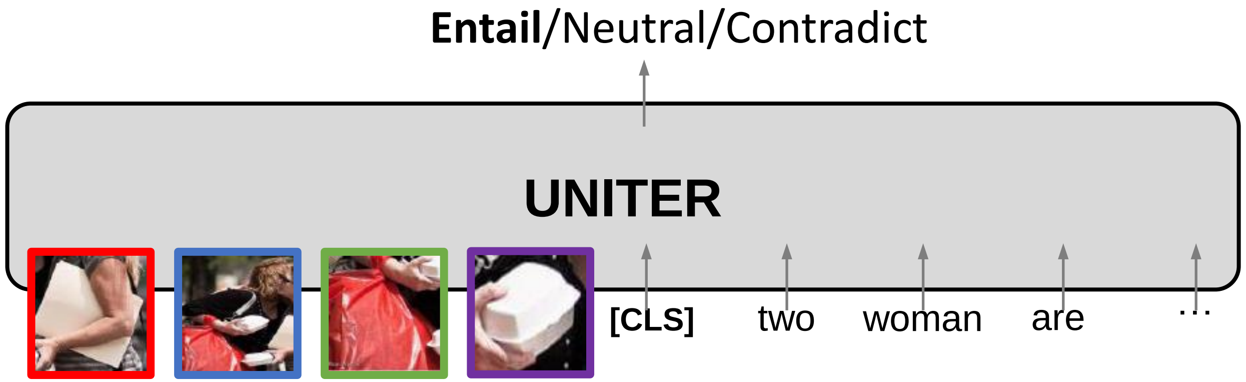
Premise **Hypothesis** **Answer**

[Xie et al. 2019]

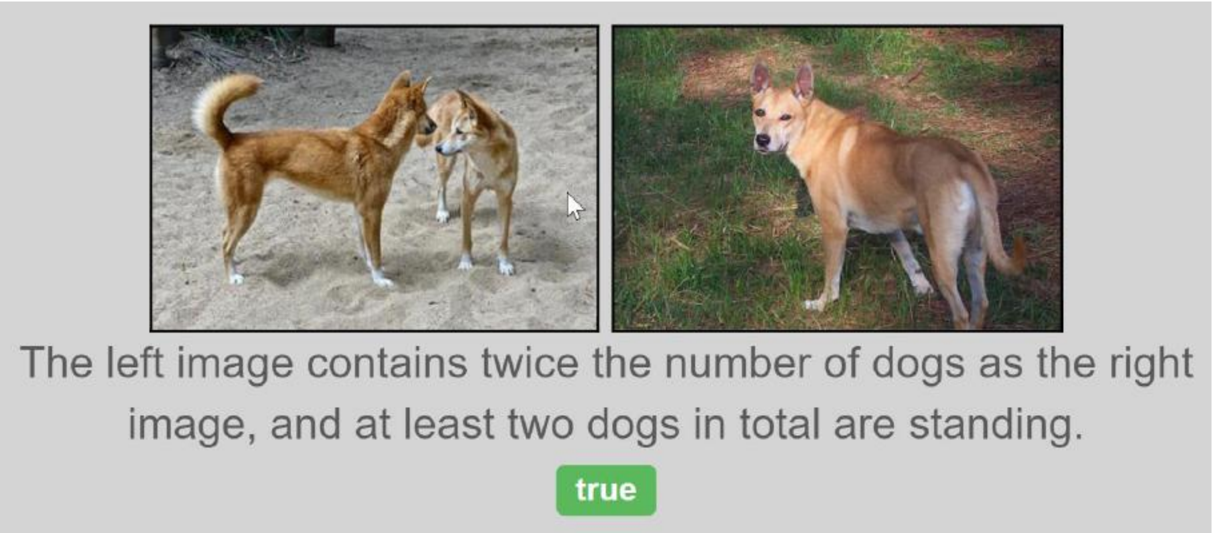
Downstream Task 2: Visual Entailment

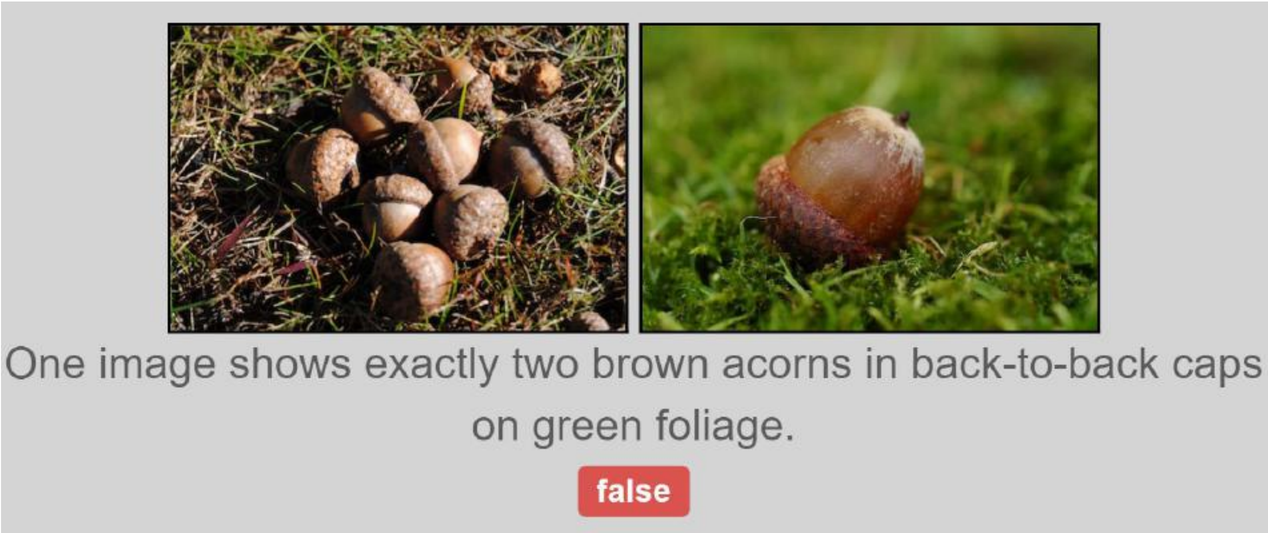


Two woman are holding packages.



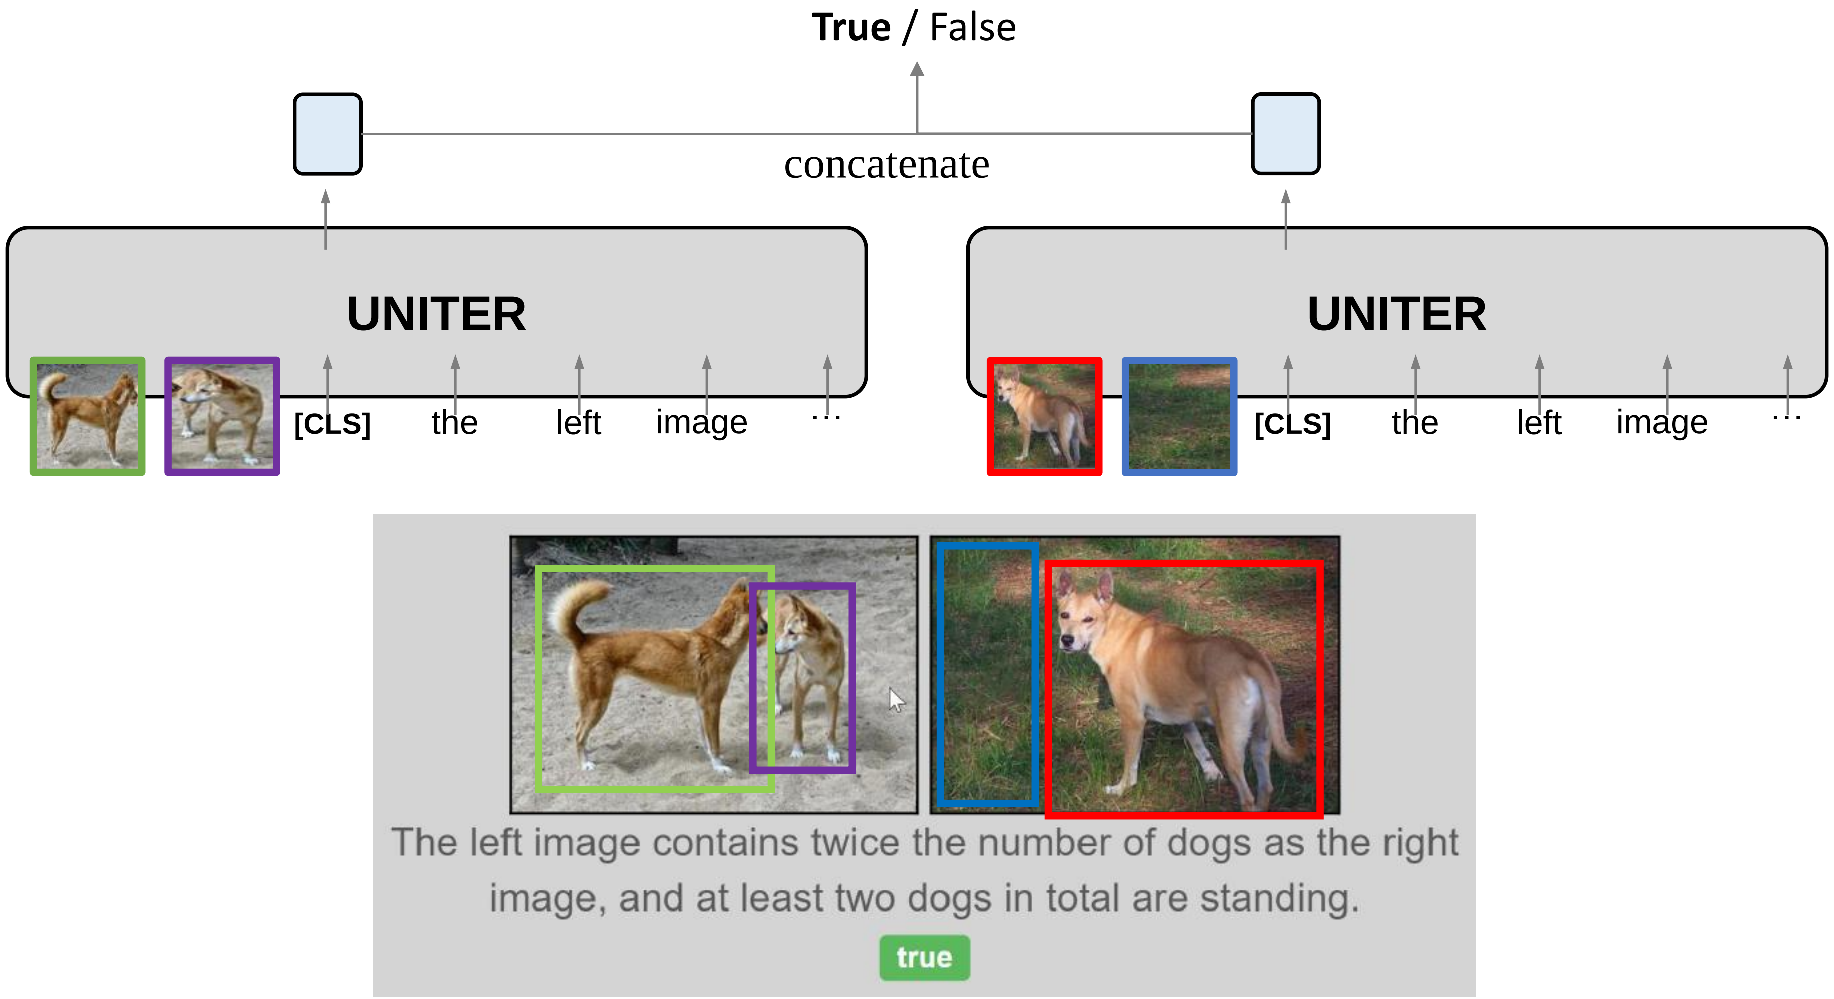
Downstream Task 3: Natural Language for Visual Reasoning



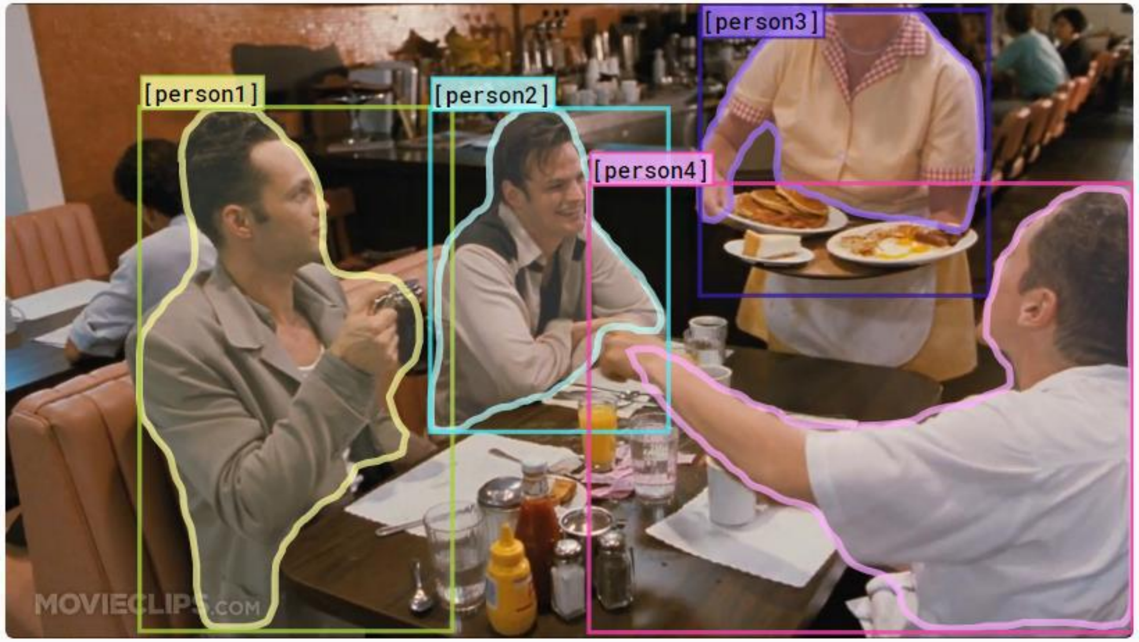


[Suhr et al. ACL 2019]

Downstream Task 3: Natural Language for Visual Reasoning



Downstream Task 4: Visual Commonsense Reasoning



Why is [person4] pointing at [person1]?

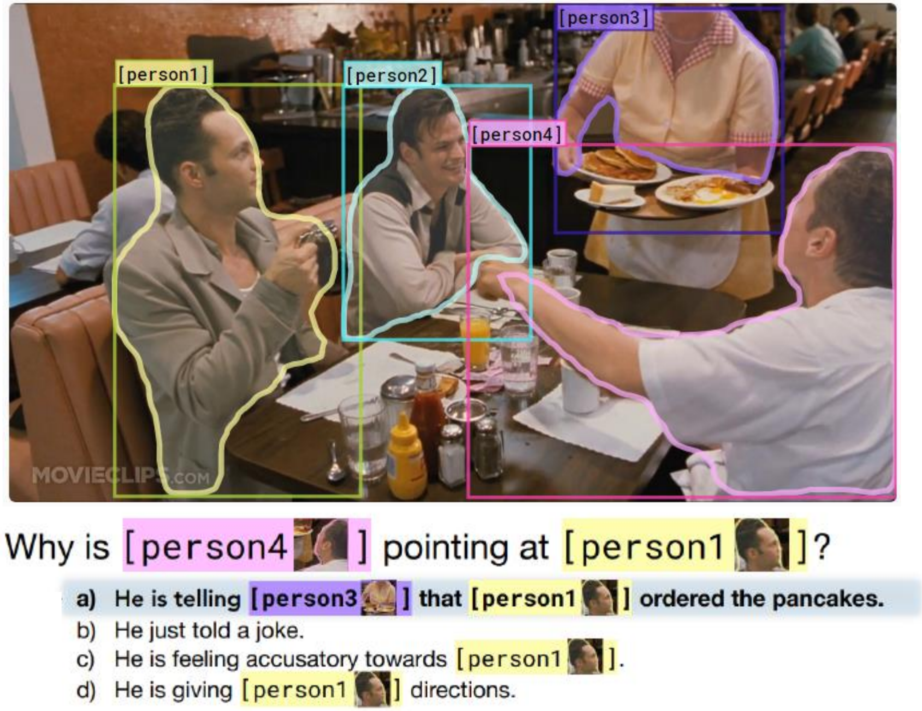
- **a) He is telling [person3] that [person1] ordered the pancakes.**
- b) He just told a joke.
- c) He is feeling accusatory towards [person1].
- d) He is giving [person1] directions.

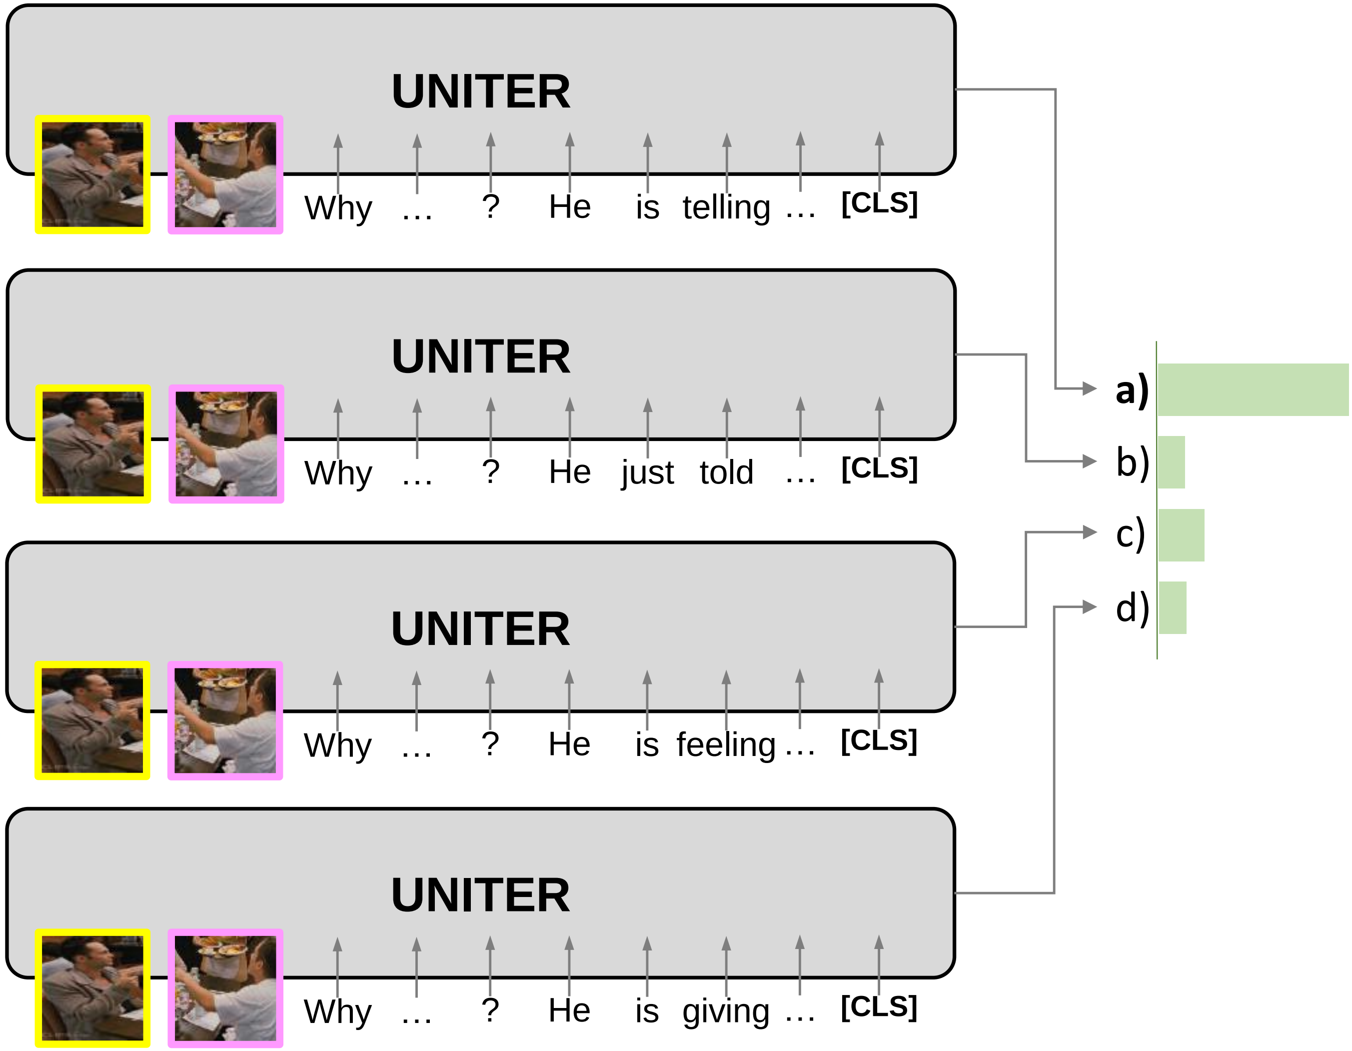
I choose (a) because:

- a) [person1] has the pancakes in front of him.
- b) [person4] is taking everyone's order and asked for clarification.
- c) [person3] is looking at the pancakes and both she and [person2] are smiling slightly.
- **d) [person3] is delivering food to the table, and she might not know whose order is whose.**

[Zellers et al. CVPR 2019]

Downstream Task 4: Visual Commonsense Reasoning



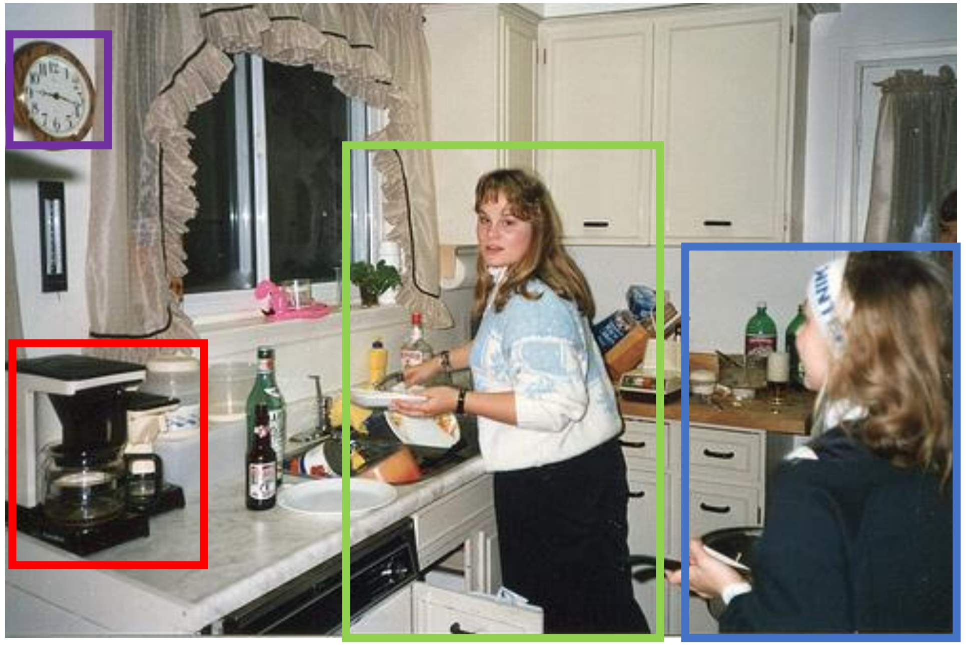


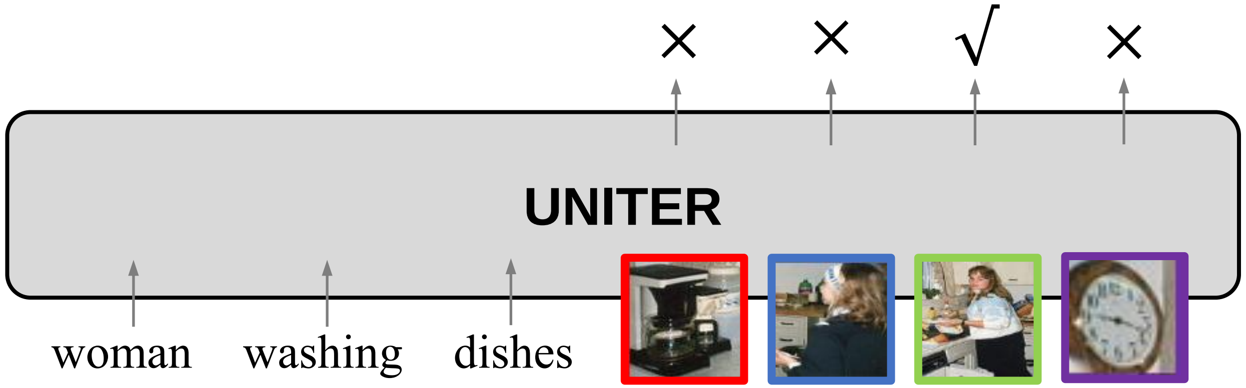
Downstream Task 5: Referring Expression Comprehension

woman washing dishes

[Kazemzadeh et al. EMNLP 2014]

Downstream Task 5: Referring Expression Comprehension





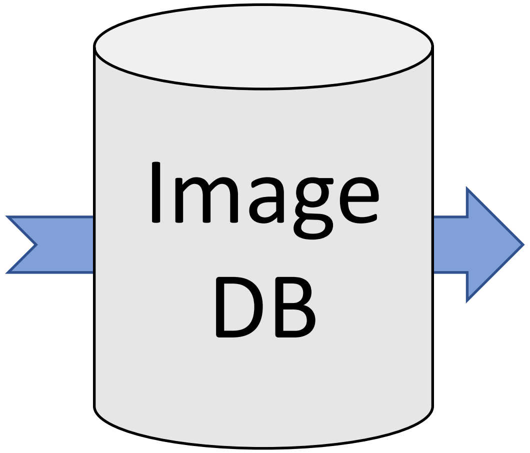
Downstream Task 6: Image-Text Retrieval

"a girl with a cat on grass"

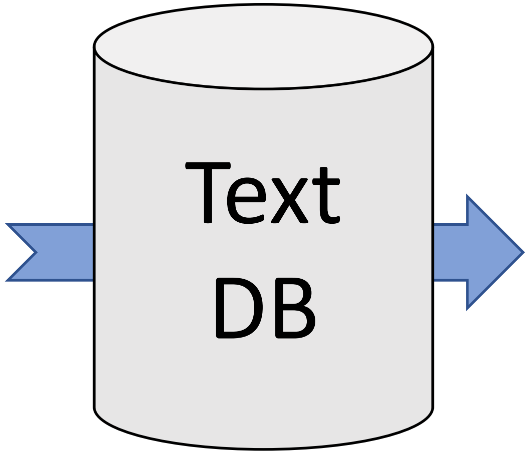
[Lee et al. ECCV 2018]

Downstream Task 6: Image-Text Retrieval

“a girl with a cat on grass”



…

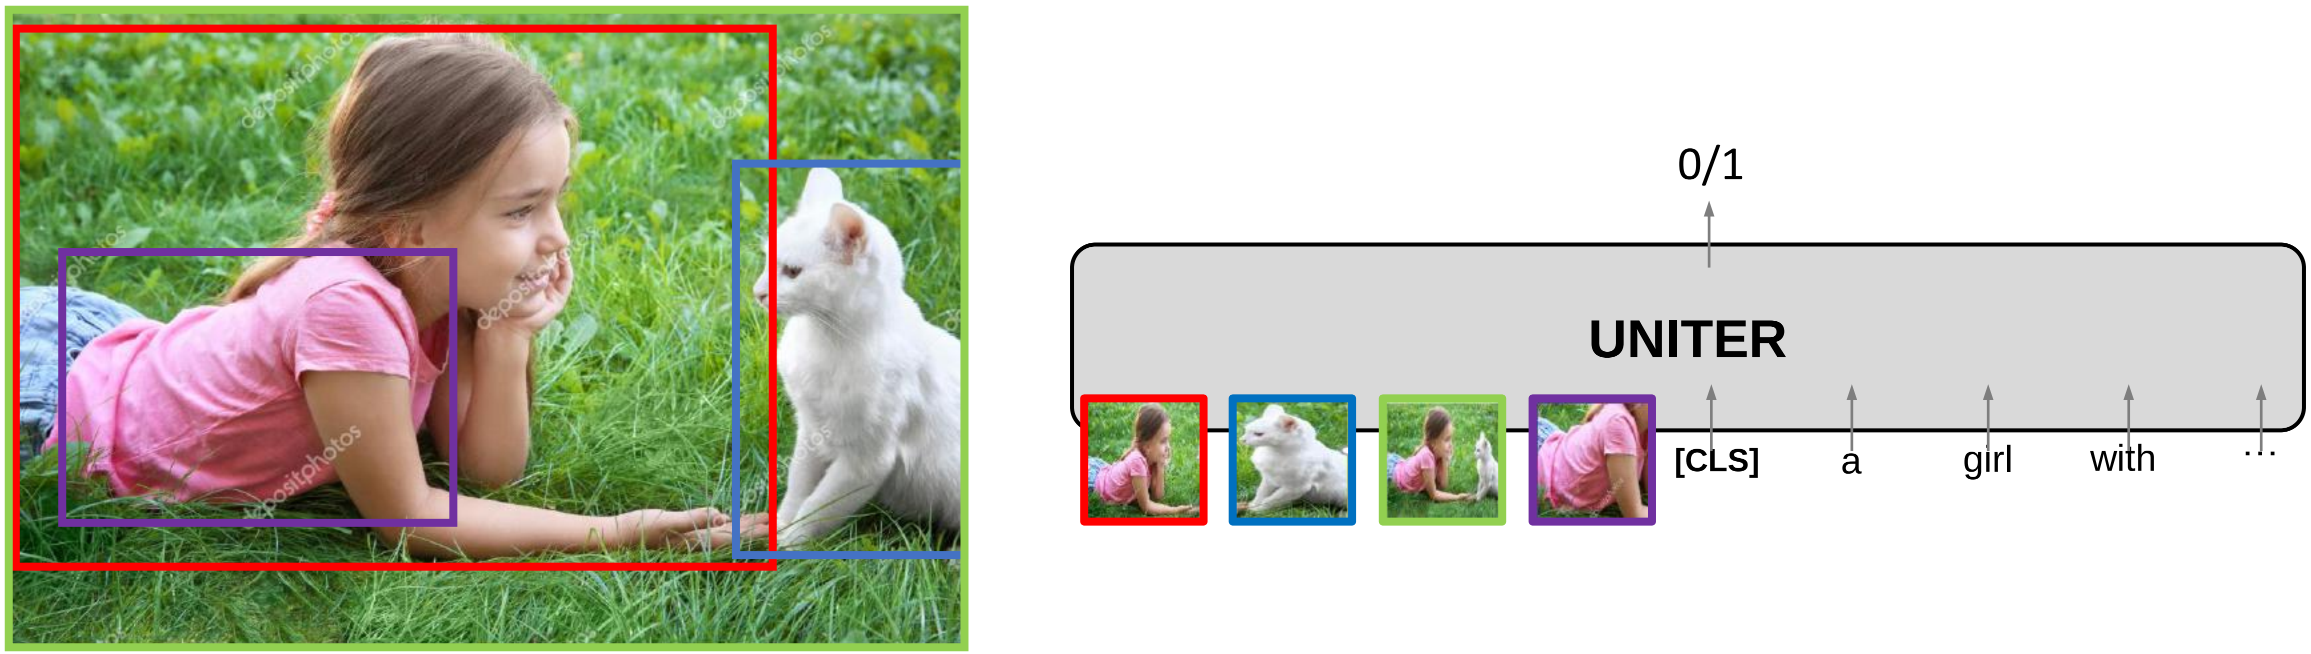


“four people with ski poles in their hands in the snow”
“four skiers hold on to their poles in a snowy forest”
“a group of young men riding skis”
“skiers pose for a picture while outside in the woods”
“a group of people cross country skiing in the woods”

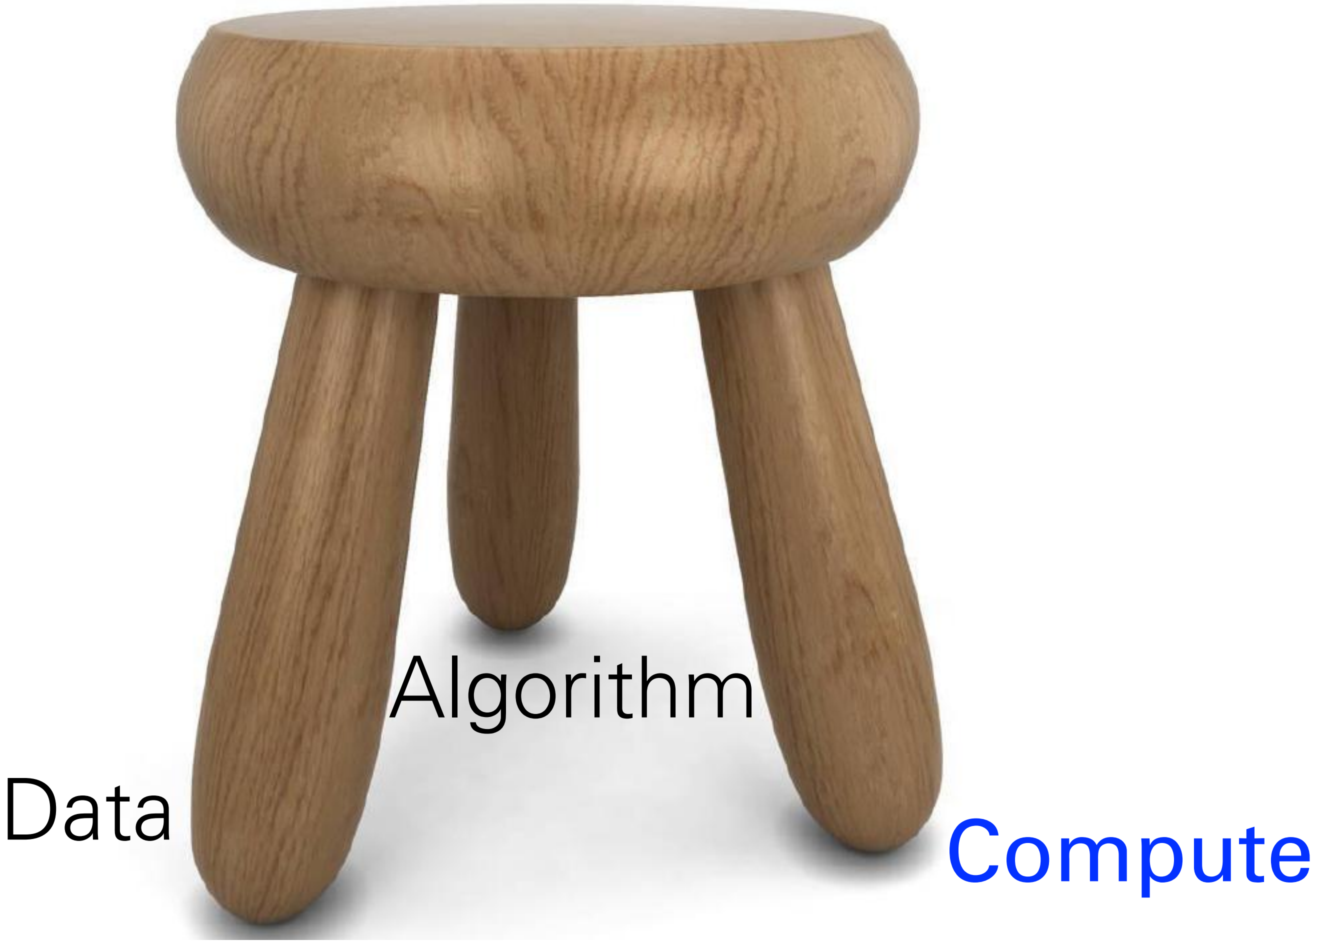
⋮

[Lee et al. ECCV 2018]

Downstream Task 6: Image-Text Retrieval



SSL for Vision + Language

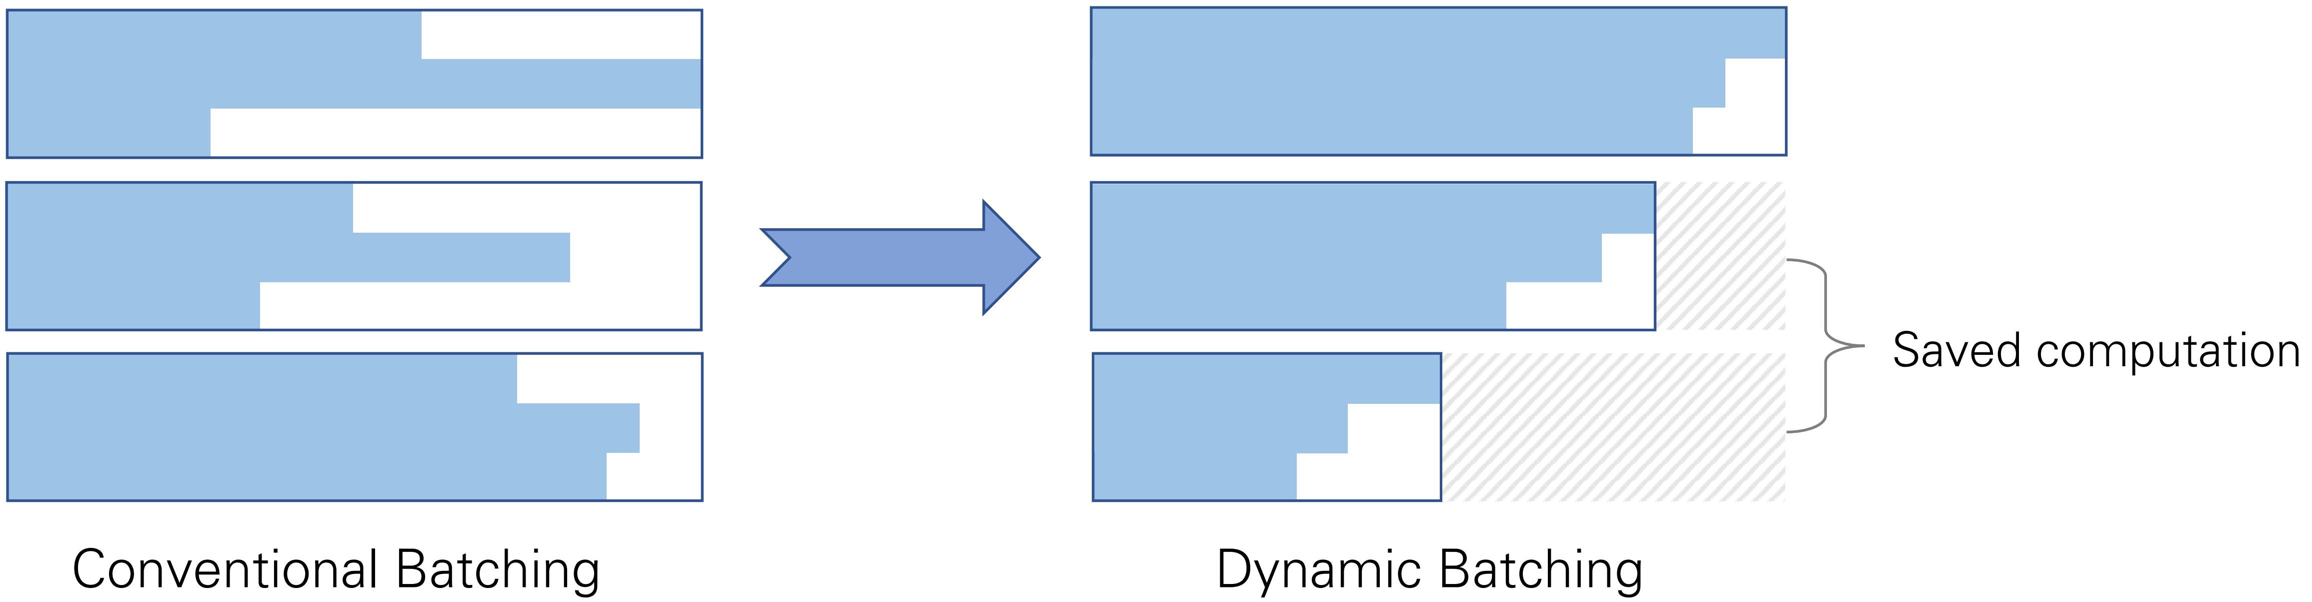


Optimization for Faster Training

- Dynamic Batching
- Gradient Accumulation
- Mixed-precision Training

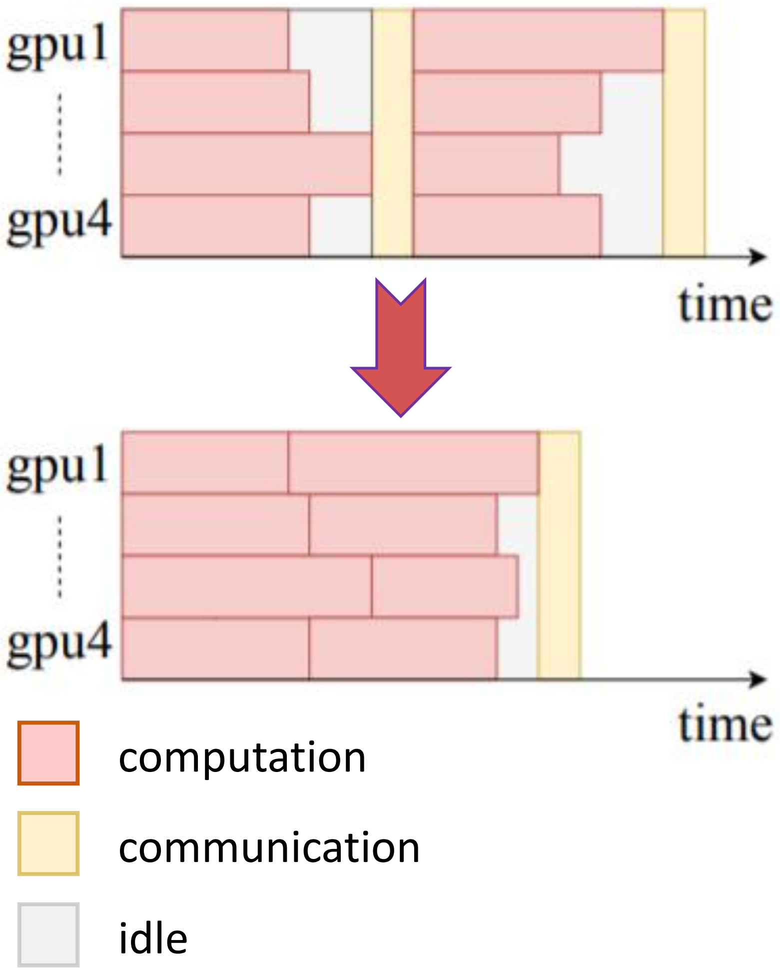
Optimization for Faster Training

- Dynamic Batching
  - Transformer (self-attention) is $O(L^2)$ (L: number of word + region)
  - Common practice: pad the input to the same maximum length (too long)
  - The solution: batch data by similar length and only do minimum padding



Optimization for Faster Training

- Dynamic Batching
- Gradient Accumulation
  - For large models, the main training bottleneck is **network communication overhead** between nodes
  - We reduce the communication frequency, hence increase overall throughput



[Ott et al. WMT 2018]

Optimization for Faster Training

- Dynamic Batching
- Gradient Accumulation
- Mixed-precision Training
  - Bring in the benefits from both worlds of 16-bit and 32-bit
  - **2x~4x speedup** compared to standard training

	FP-16	FP-32
Speed	**Fast**	Slow
Memory	**Low**	High
Numerical Stability	Bad	**Good**

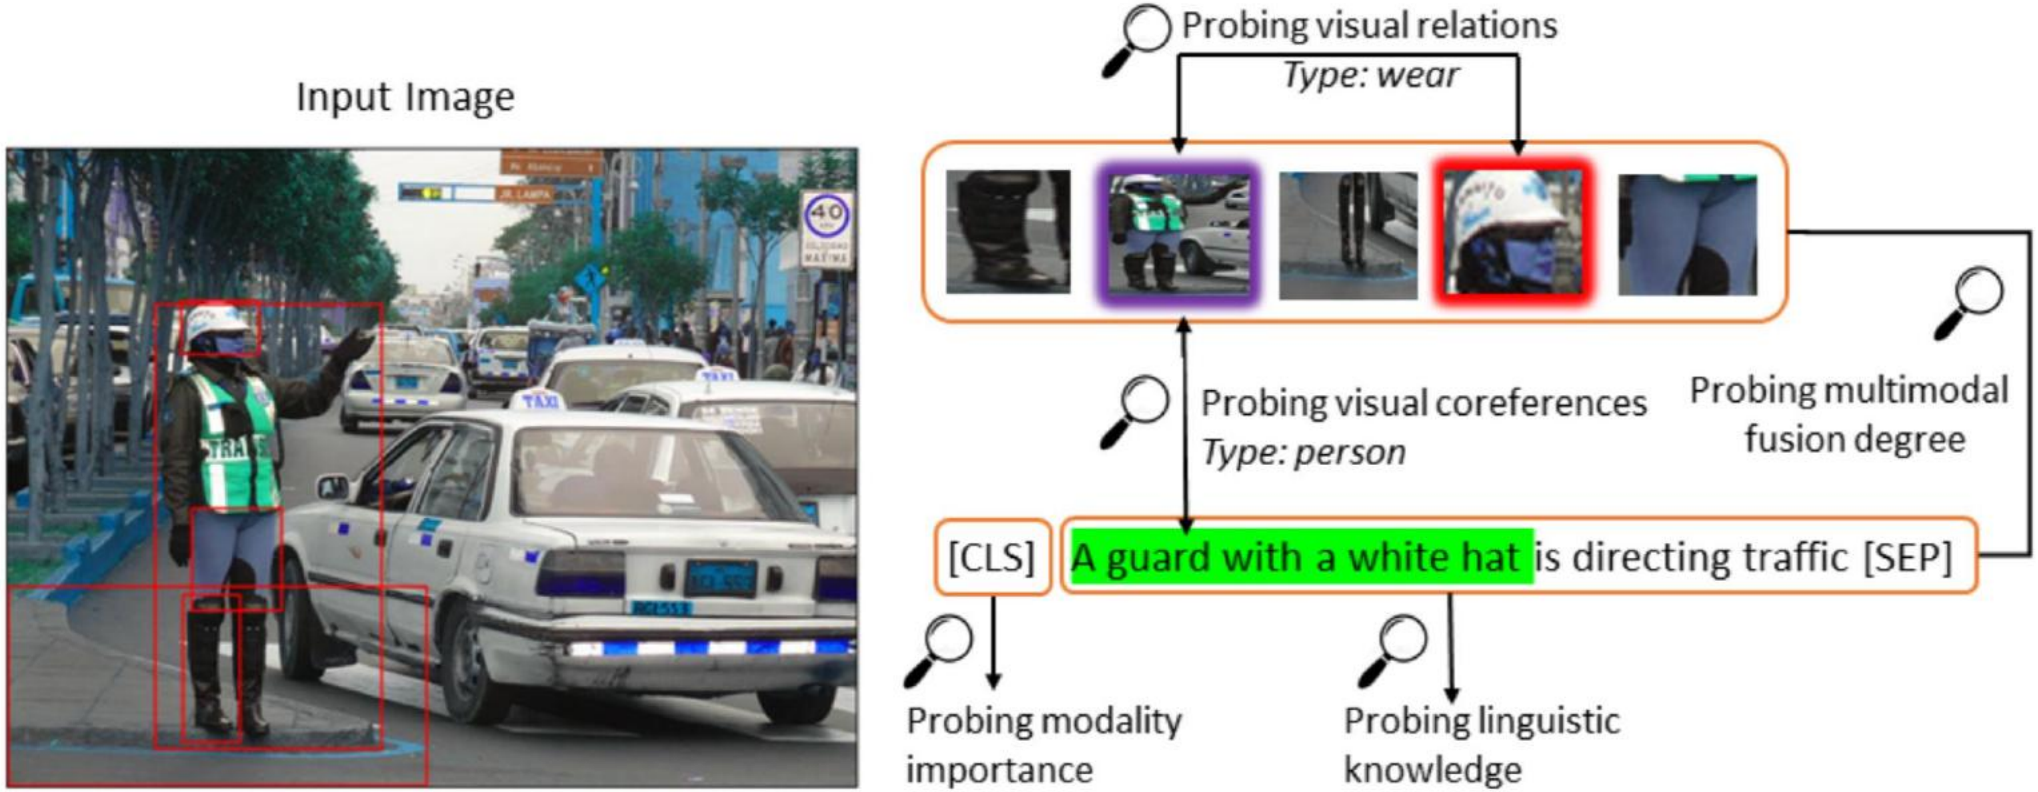
Moving Forward…

- Interpretability of VLP models
  - VALUE [Cao et al., 2020]
- Better visual features
  - Pixel-BERT [Huang et al., 2020]
  - OSCAR [Li et al., 2020]
- Adversarial (pre-)training for V+L
  - VILLA [Gan et al., 2020]

What do V+L pretrained models learn?

VALUE: **V**ision-**A**nd-**L**anguage **U**nderstanding **E**valuation



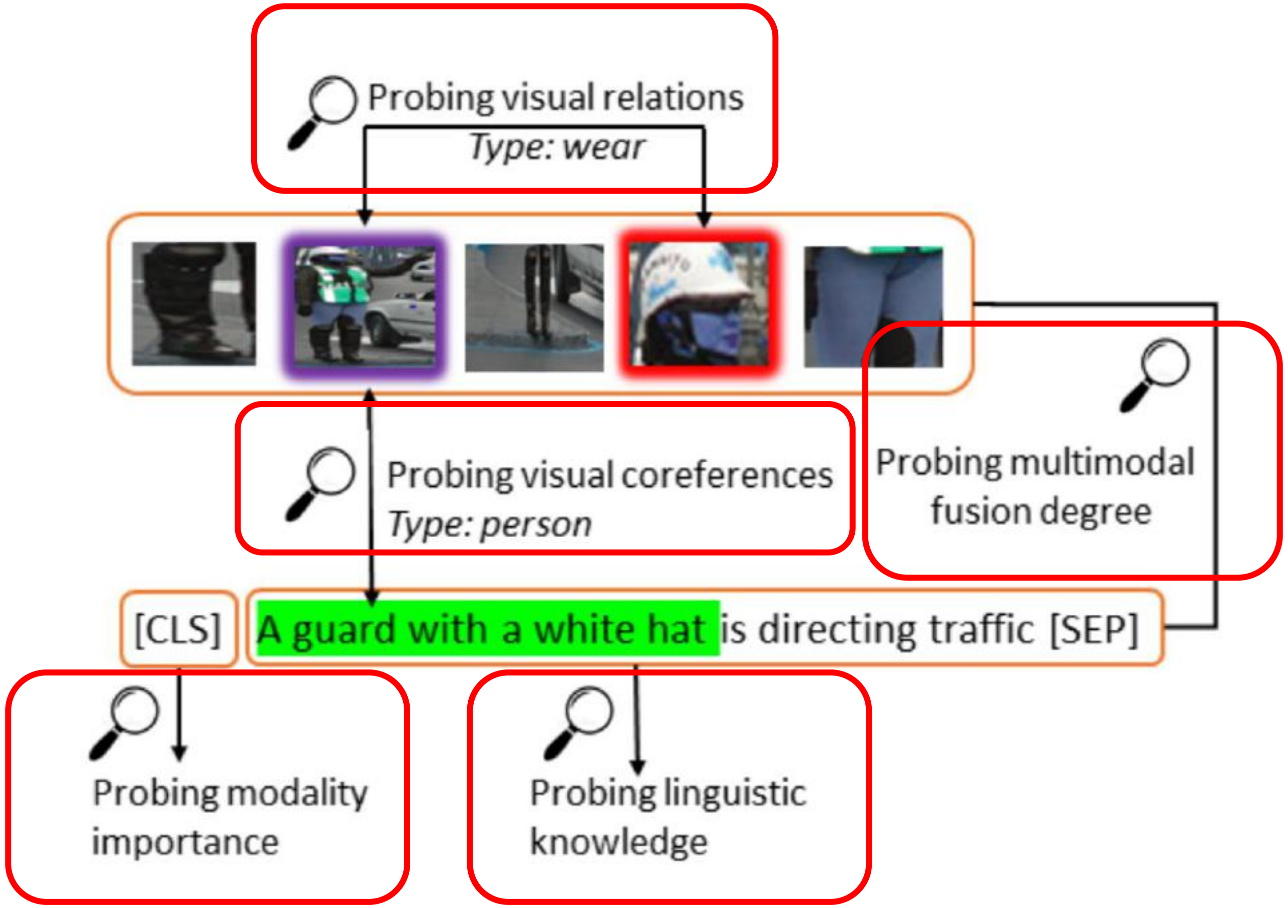
[VALUE, Cao et al. 2020]

Probing Pre-Trained Models

- Single-stream vs. two-stream
- Attention weight probing
- 12 layers x 12 heads = 144 attention weight matrices
- Embedding probing
  - 768-dim x 12 layers

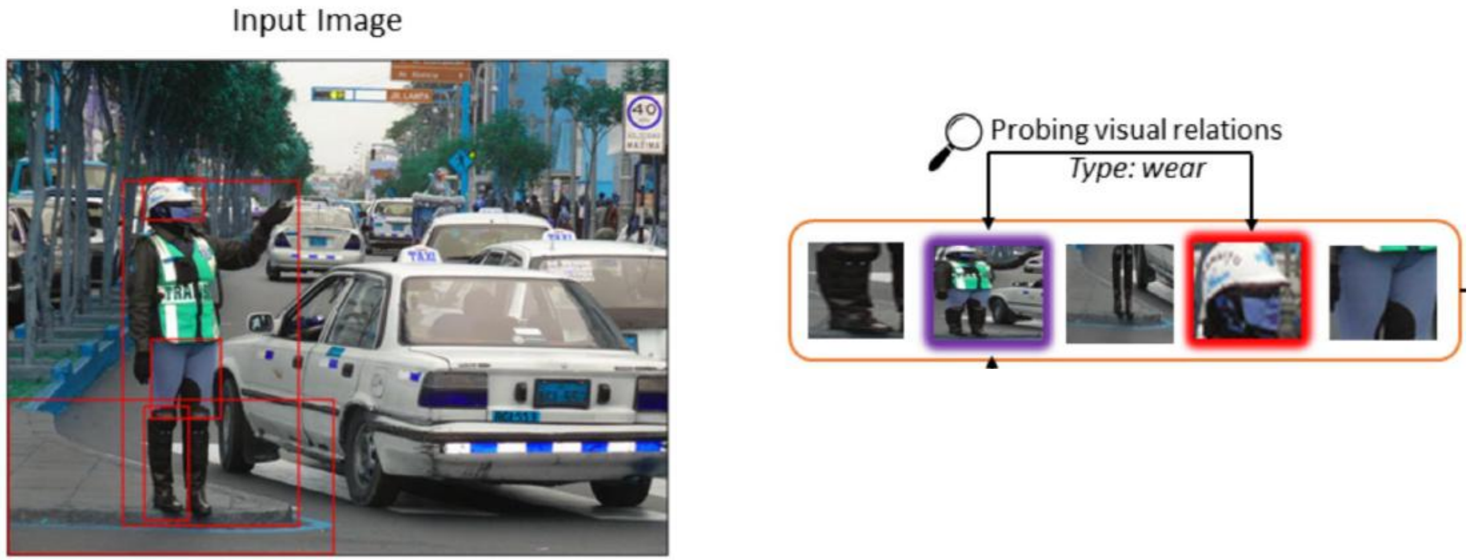
Modality Probing

- Visual Probing
- Linguistic Probing
- Cross-Modality Probing



Modality Probing

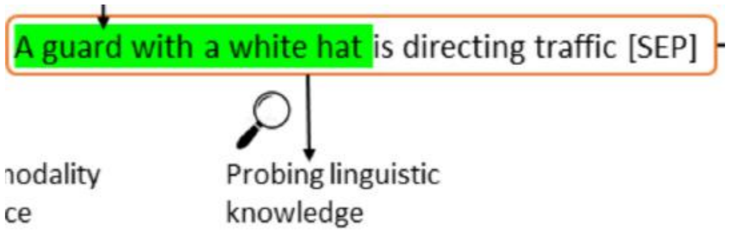
- Visual Probing
  - Visual relation detection (existence, type)
  - VG dataset; top-32 frequent relations



Modality Probing

- Visual Probing
- Linguistic Probing
  - Surface tasks (sentence length)
  - Syntactic tasks (syntax tree, top constituents, ...)
  - Semantic tasks (tense, subject/object, ...)

Input Image



Modality Probing

- Visual Probing
- Linguistic Probing
- Cross-Modality Probing
  - Multimodal fusion degree
  - Modality importance
  - Visual coreference

VALUE: Vision-And-Language Understanding Evaluation

1. Cross-modal fusion:
    a. In single-stream model (UNITER), deeper layers have more cross-modal fusion.
    b. The opposite for two-stream model (LXMERT).
2. Text modality is more important than image.
3. In single-stream model, some heads only focus on cross-modal interaction.
4. Visual relations are learned in pre-training.
5. Linguistic knowledge can be found.

From Region Features to Grid Features

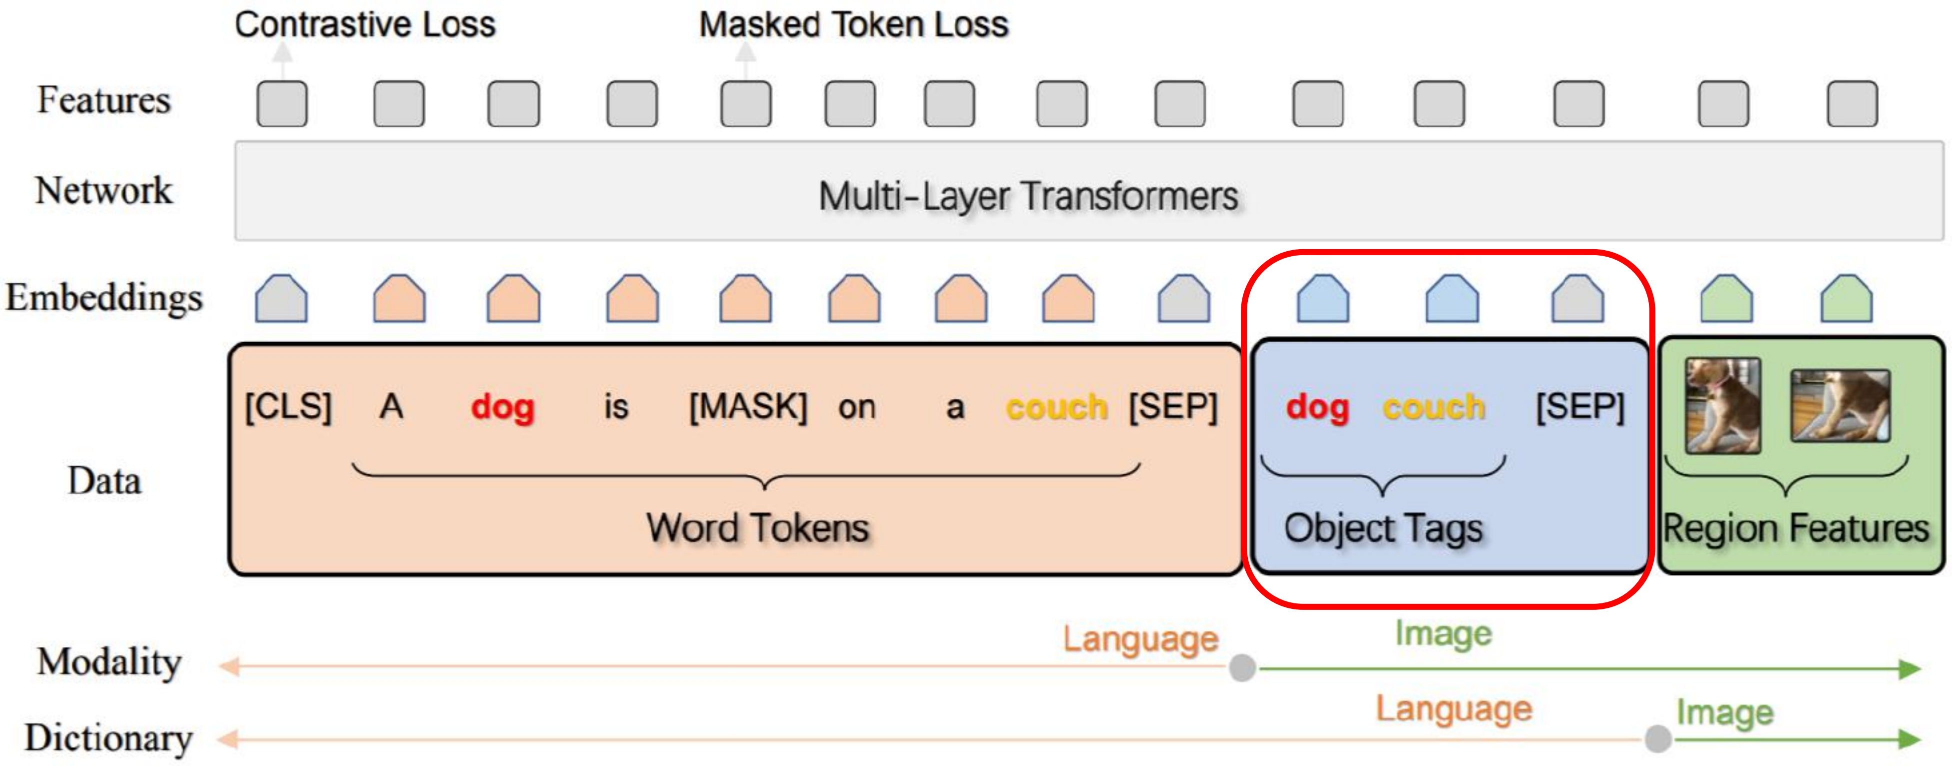
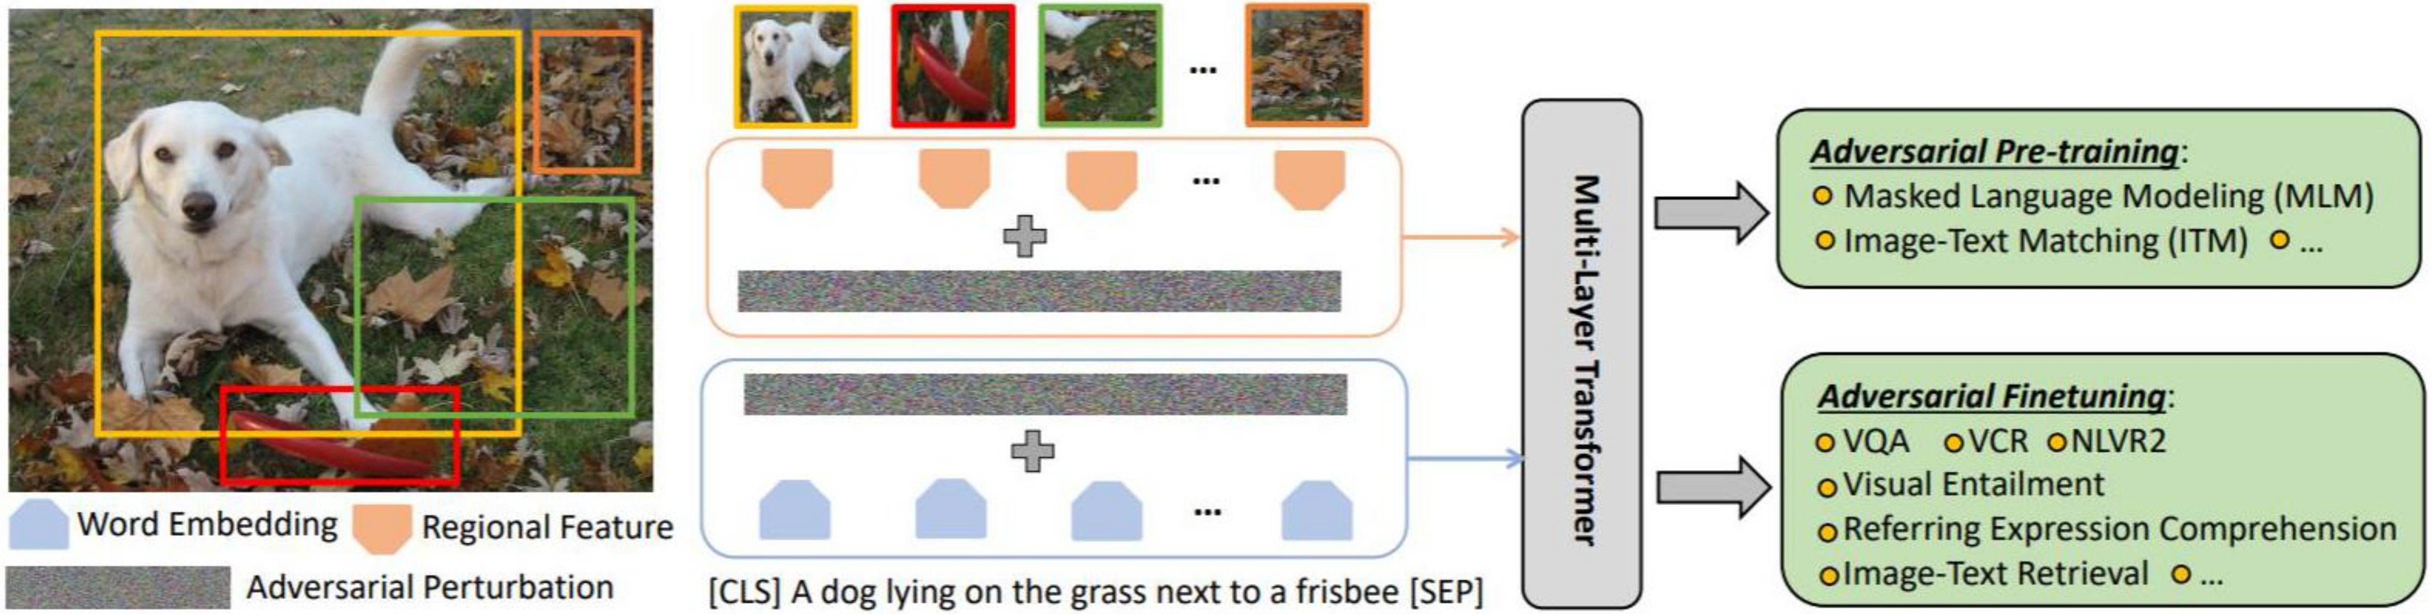
$$x \triangleq [\underbrace{w}_{\text{language}}, \underbrace{q, v}_{\text{image}}] = [\underbrace{w, q}_{\text{language}}, \underbrace{v}_{\text{image}}] \triangleq x'$$



[OSCAR, Li et al. 2020]

VILLA: Vision-and-Language Large-scale Adversarial training



[VILLA, Gan et al. 2020]

VILLA: Vision-and-Language Large-scale Adversarial training

1. Task-agnostic adversarial pre-training
2. Task-specific adversarial finetuning
3. “Free” adversarial training
   - FreeLB [Zhu et al., ICLR 2020]
   - KL-constraint
4. Improved generalization
   - No trade-off between accuracy and robustness.

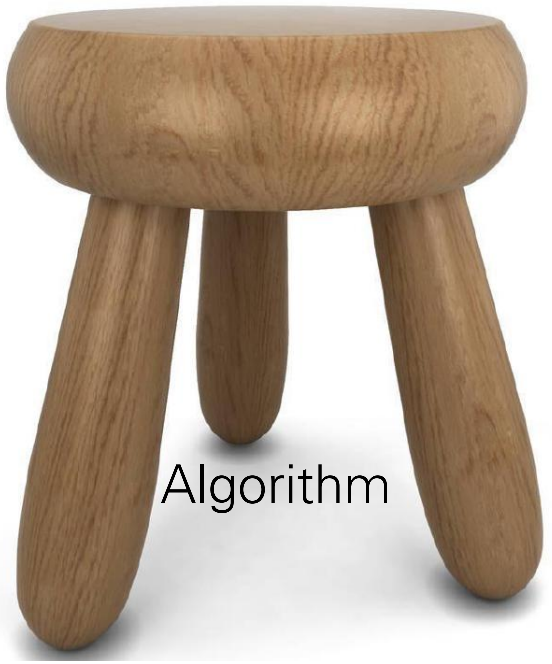
Take-away

- SOTA pre-training for V+L
  - Available datasets
  - Model architecture
  - Pre-training tasks



- Future directions
  - Study the representation learned by pre-training → pruning/compression
  - Better visual features → end-to-end training of CNN
  - Reasoning tasks (GQA)

Beyond Image+Text Pre-Training

Pre-training Data for Video + Language

TV Dataset

[Lei et al. EMNLP 2018]

- 22K video clips from 6 popular TV shows
- Each video clip is 60-90 seconds long
- Dialogue ("character name: subtitle") is provided

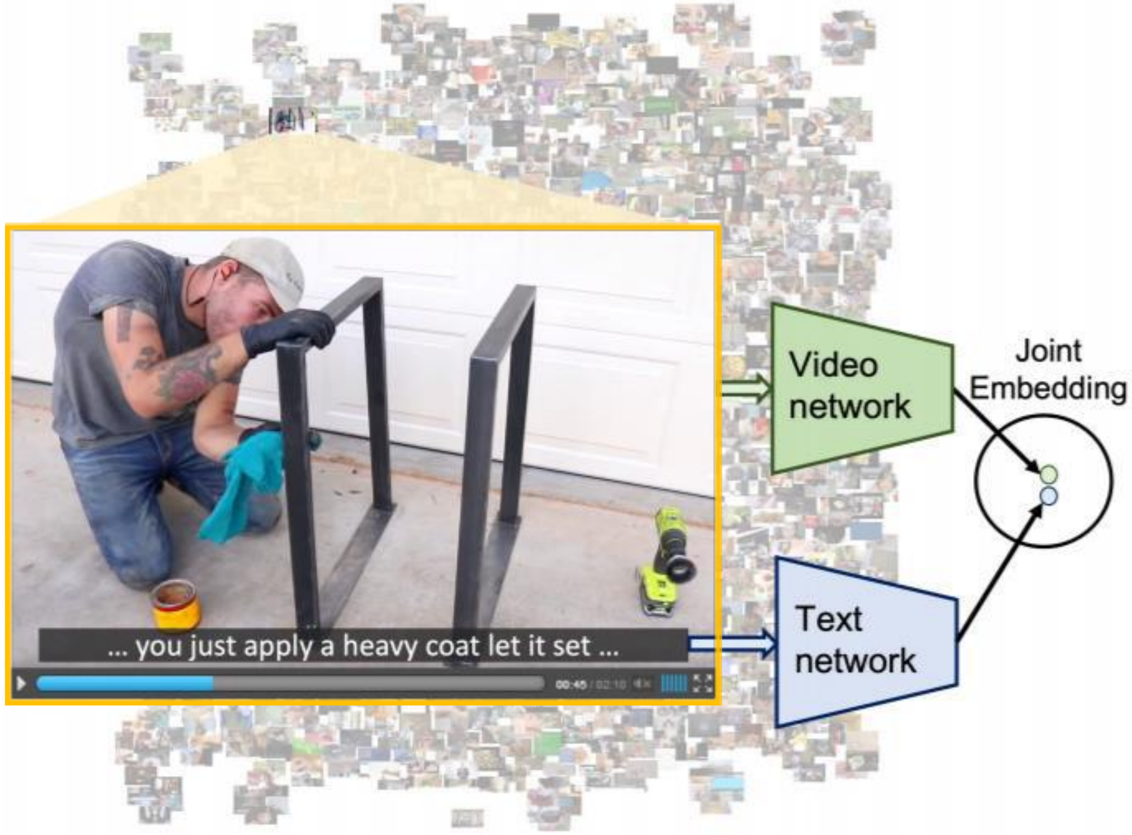
HowTo100M Dataset

[Miech et al. ICCV 2019]

- 1.22M instructional videos from YouTube
- Each video is 6 minutes long on average
- Narrations in different languages

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips

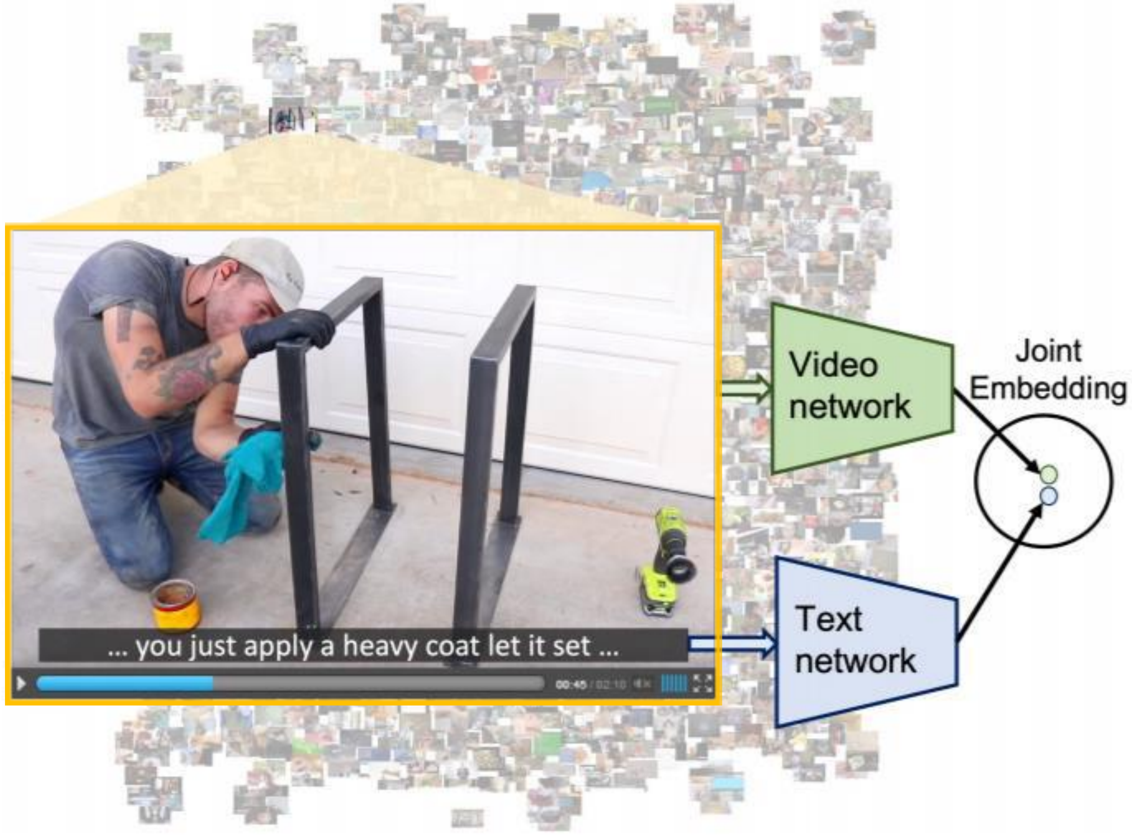
Pre-training



[Miech et al, ICCV 2019]

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips

Pre-training



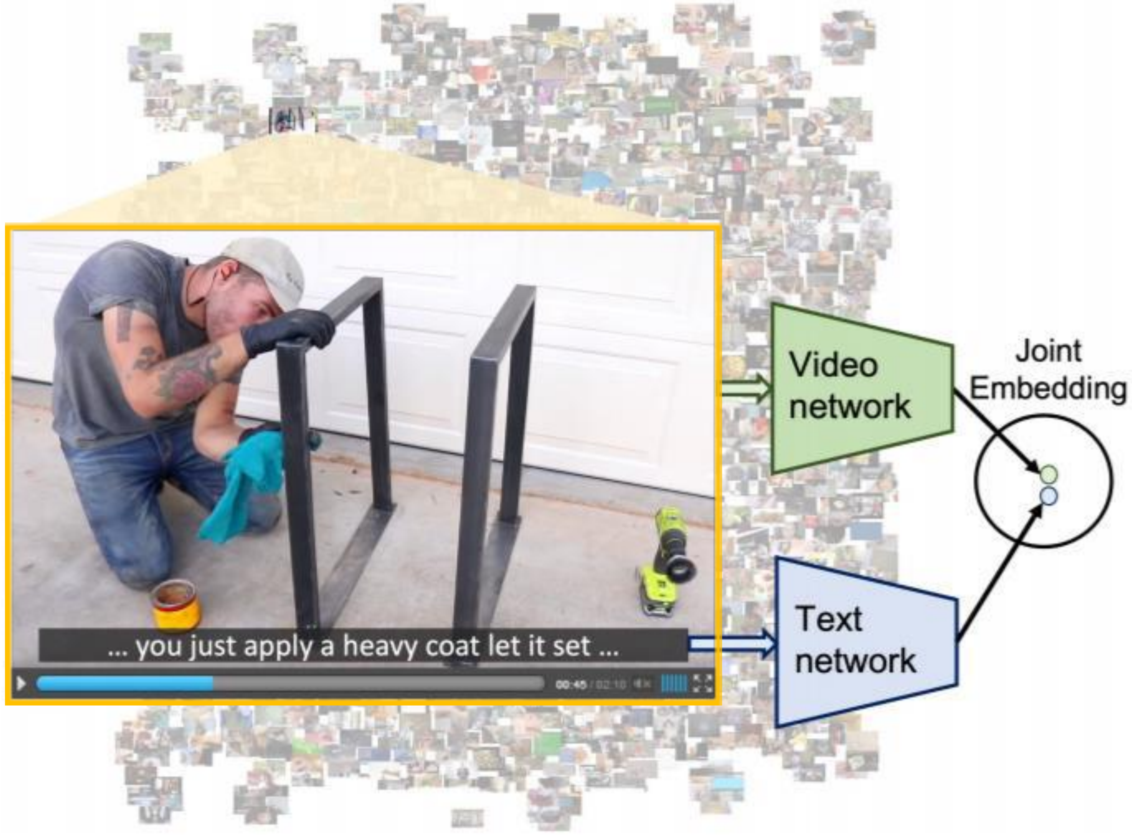
Large-scale Pre-training Dataset

- 136M video clips with narrations from 1.2M YouTube videos spanning 23K activities

[Miech et al, ICCV 2019]

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips

Pre-training



Large-scale Pre-training Dataset

- 136M video clips with narrations from 1.2M YouTube videos spanning 23K activities

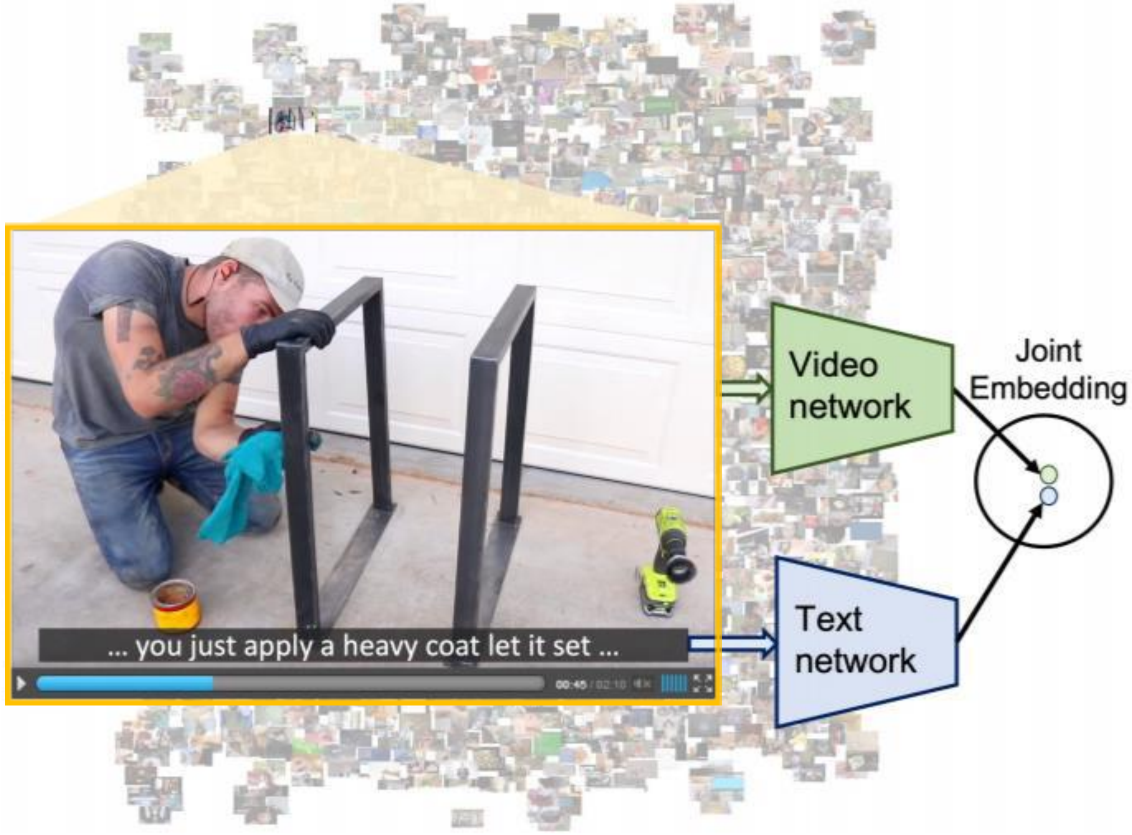
Video Representations

- 2D features from ImageNet pretrained ResNet-152
- 3D features from Kinetics pretrained ResNeXt-101

[Miech et al, ICCV 2019]

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips

Pre-training



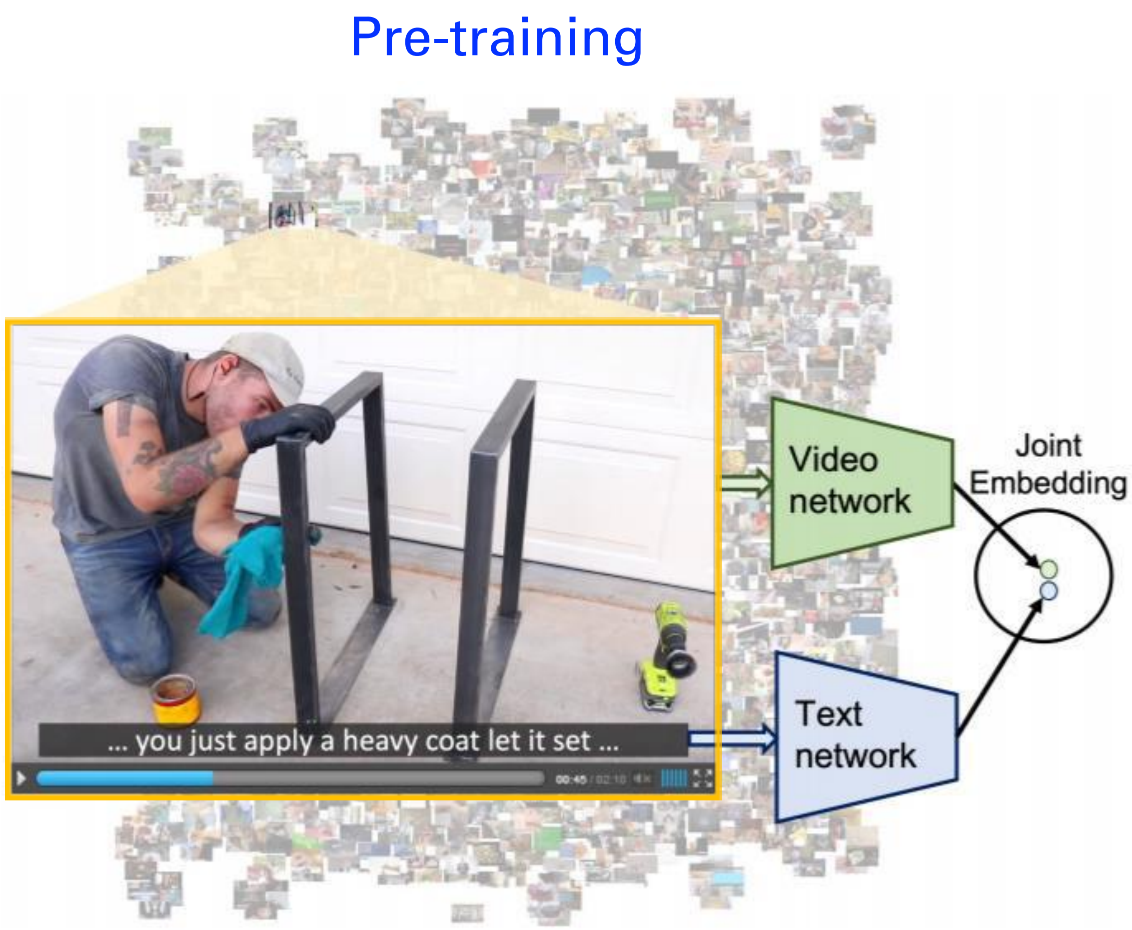
Large-scale Pre-training Dataset
- 136M video clips with narrations from 1.2M YouTube videos spanning 23K activities

Video Representations
- 2D features from ImageNet pretrained ResNet-152
- 3D features from Kinetics pretrained ResNeXt-101

Text Representations
- GoogleNews pre-trained word2vec embeddings

[Miech et al, ICCV 2019]

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips



Large-scale Pre-training Dataset
- 136M video clips with narrations from 1.2M YouTube videos spanning 23K activities

Video Representations
- 2D features from ImageNet pretrained ResNet-152
- 3D features from Kinetics pretrained ResNeXt-101

Text Representations
- GoogleNews pre-trained word2vec embeddings

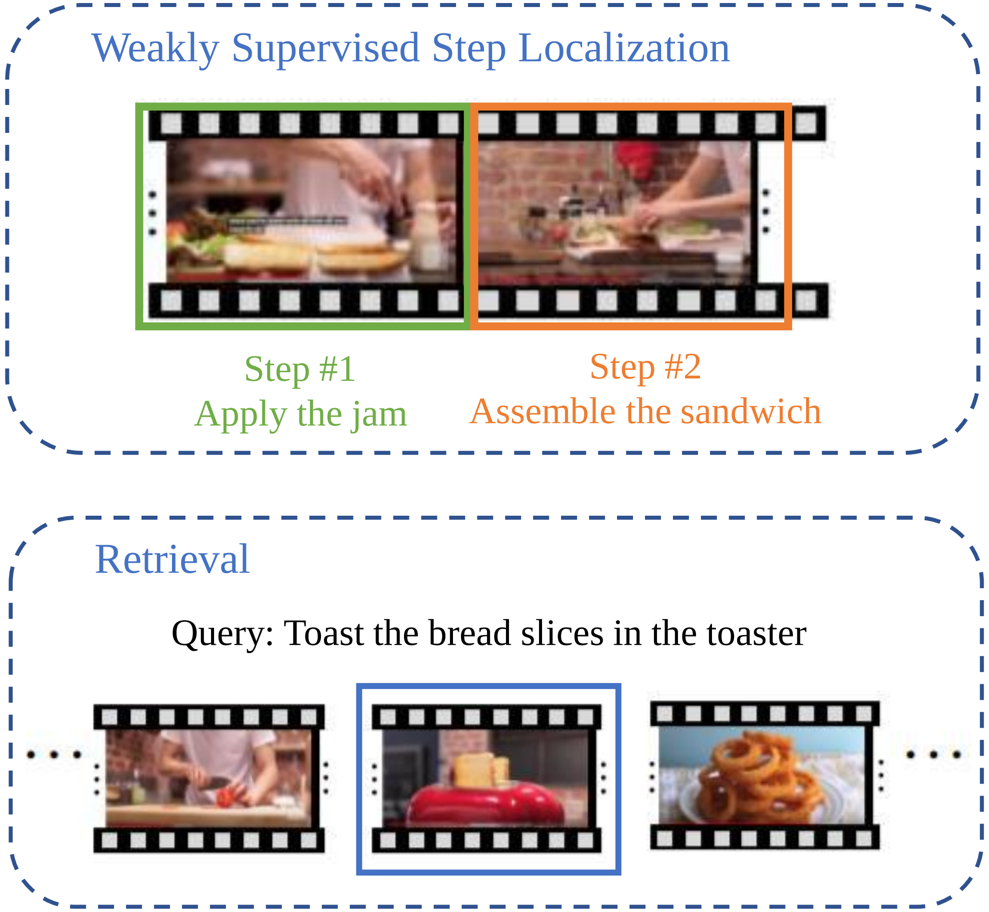
Pre-training Joint Embedding
- Non-linear functions to embed both modalities to a common embedding space
- Supervise the training with max-margin ranking loss

[Miech et al, ICCV 2019]

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips

Pre-training

Downstream Tasks



[Miech et al, ICCV 2019]

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips

Model	CrossTask (Averaged Recall)
Fully-supervised Upper-bound [1]	31.6
HowTo100M PT only (weakly supervised)	33.6

Step Localization

- HowTo100M PT is better than training a fully supervised model on a small training set

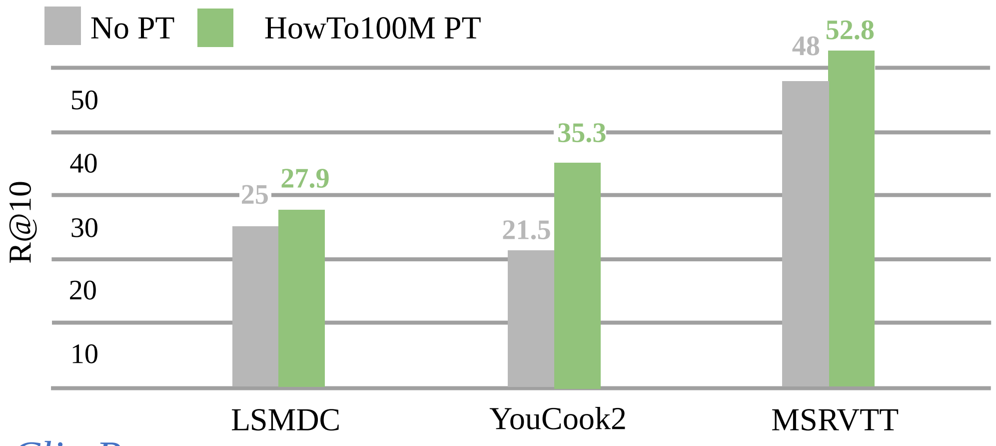
[1] Zhukov, Dimitri, et al. "Cross-task weakly supervised learning from instructional videos." CVPR 2019

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips

Model	CrossTask (Averaged Recall)
Fully-supervised Upper-bound [1]	31.6
HowTo100M PT only (weakly supervised)	33.6

Step Localization

❖ HowTo100M PT is better than training a fully supervised model on a small training set



Clip Retrieval

❖ HowTo100M PT largely boosts model performance despite the domain differences

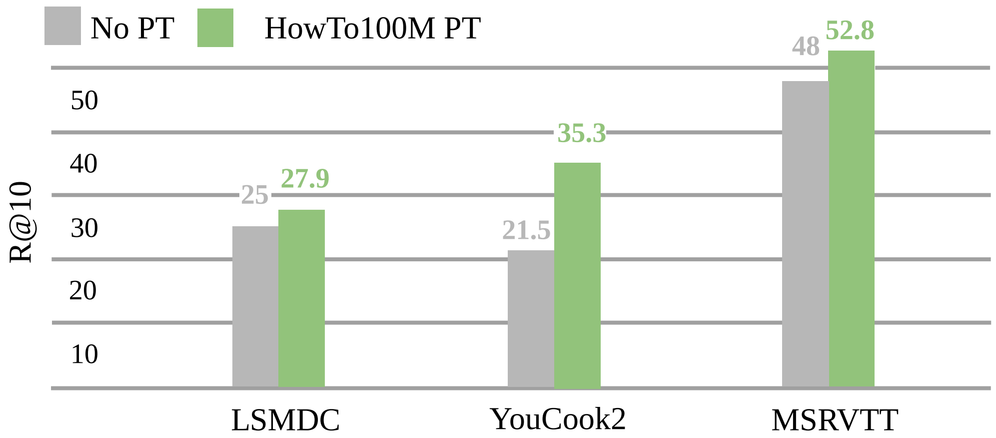
[1] Zhukov, Dimitri, et al. "Cross-task weakly supervised learning from instructional videos." CVPR 2019

HowTo100M: Learning a Text-Video Embedding from Watching Hundred Million Narrated Video Clips

Model	CrossTask (Averaged Recall)
Fully-supervised Upper-bound [1]	31.6
HowTo100M PT only (weakly supervised)	33.6

Step Localization

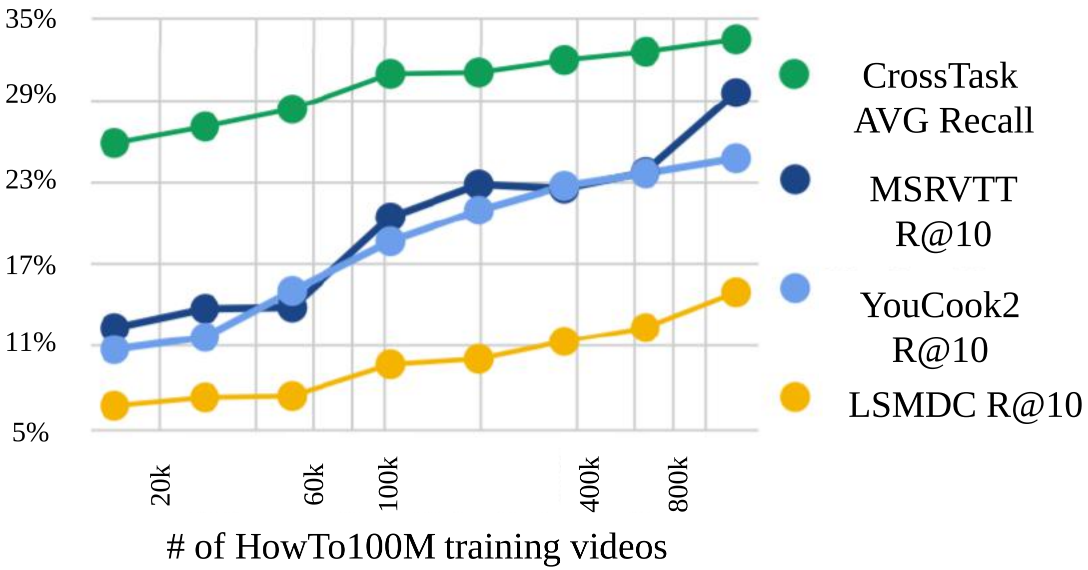
- ❖ HowTo100M PT is better than training a fully supervised model on a small training set



Clip Retrieval

- ❖ HowTo100M PT largely boosts model performance despite the domain differences

Downstream Performance vs. Pre-training Data Size

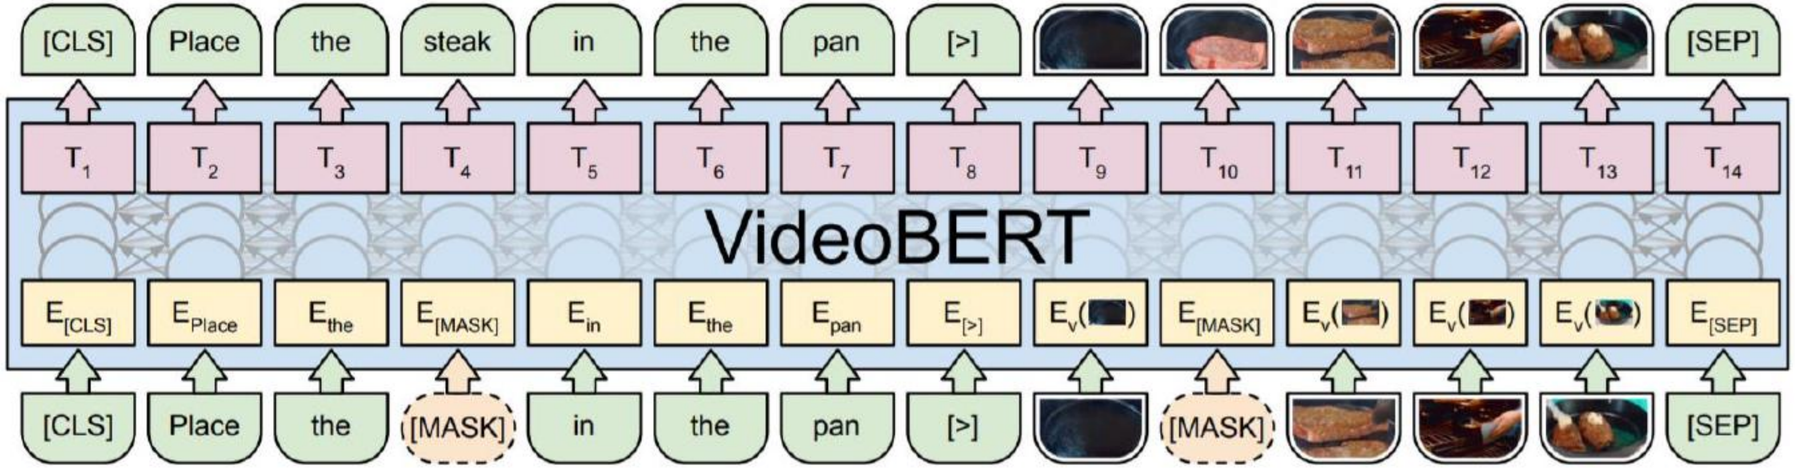


- ❖ Adding more data gives better results across all downstream tasks

[1] Zhukov, Dimitri, et al. “Cross-task weakly supervised learning from instructional videos.” CVPR 2019

VideoBERT: A Joint Model for Video and Language Representation Learning

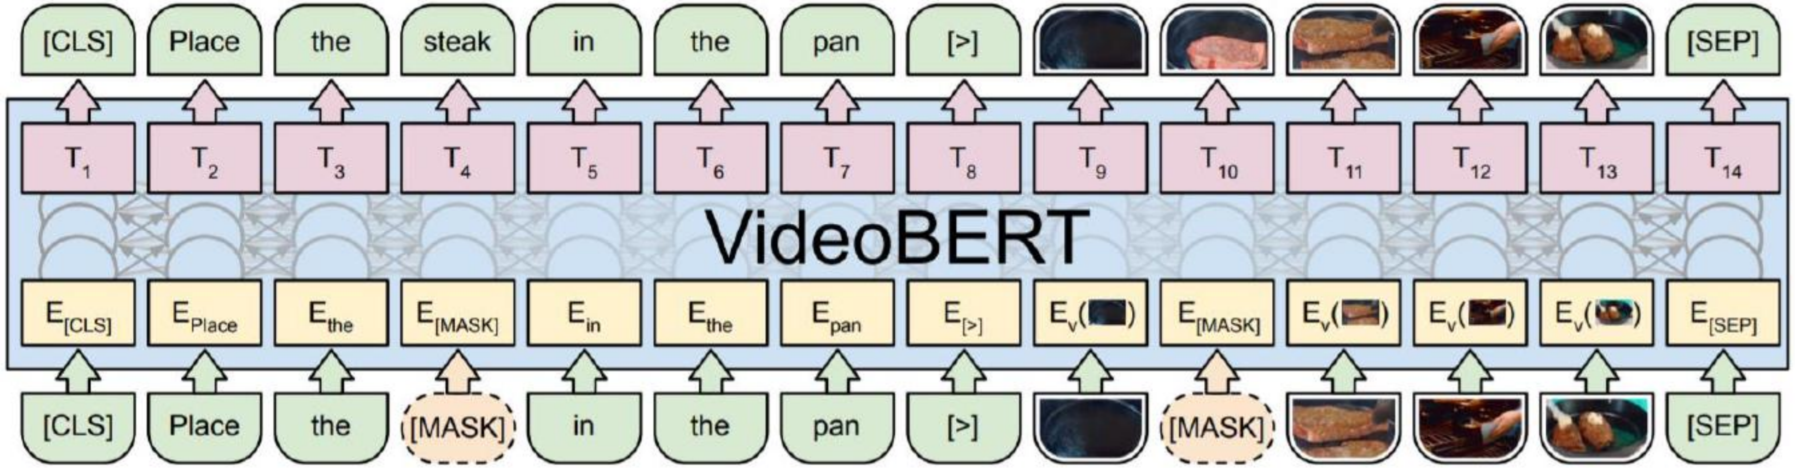
Pre-training



[Sun et al., ICCV 2019]

VideoBERT: A Joint Model for Video and Language Representation Learning

Pre-training



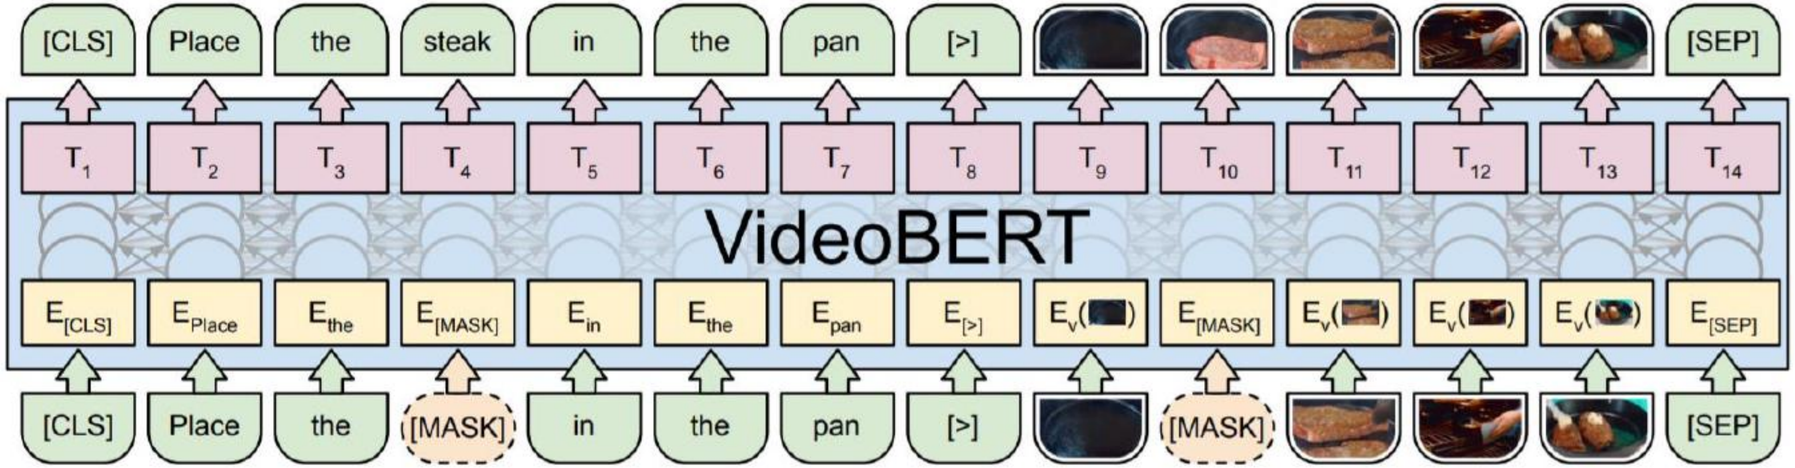
Large-scale Pre-training Dataset

- 312K cooking/recipe videos from YouTube

[Sun et al., ICCV 2019]

VideoBERT: A Joint Model for Video and Language Representation Learning

Pre-training



Large-scale Pre-training Dataset

- 312K cooking/recipe videos from YouTube

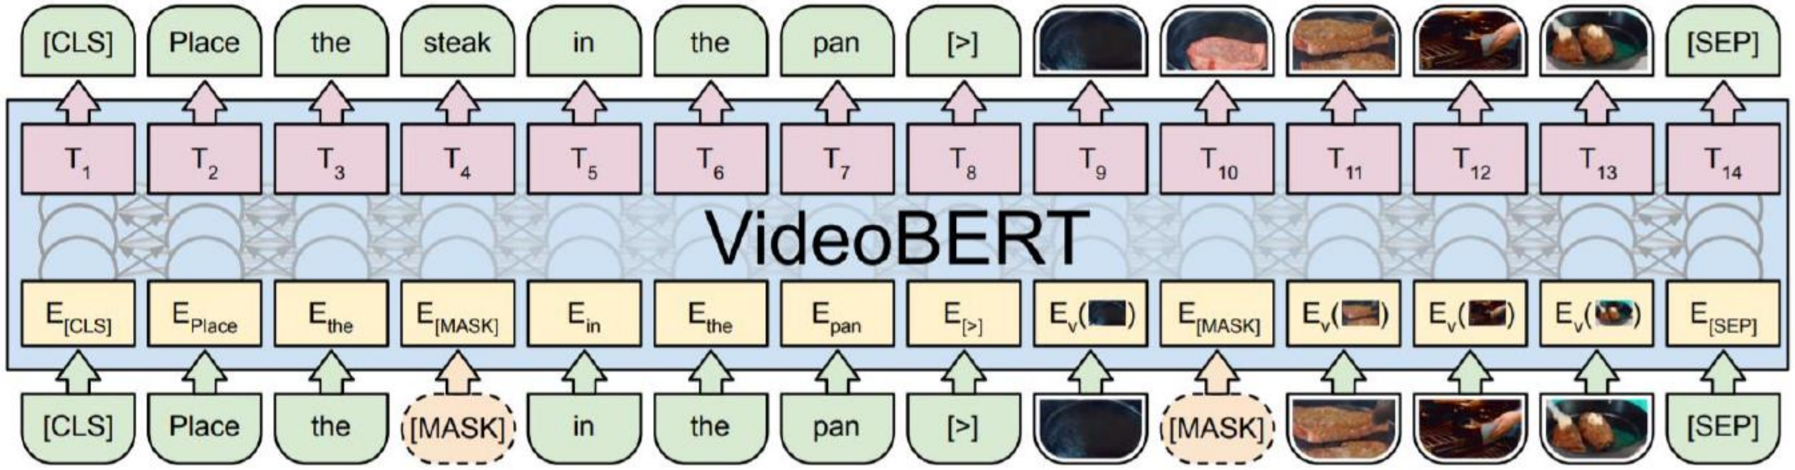
Text Representations

- Tokenized into WordPieces, following BERT

[Sun et al., ICCV 2019]

VideoBERT: A Joint Model for Video and Language Representation Learning

Pre-training



Large-scale Pre-training Dataset

- 312K cooking/recipe videos from YouTube

Video Representations

- 3D features from Kinetics pretrained S3D
- Tokenized into 21K clusters using hierarchical k-means

Text Representations

- Tokenized into WordPieces, following BERT

[Sun et al., ICCV 2019]

Segment #1 Segment #2

[Sun et al., ICCV 2019]

CBT: Learning Video Representations using Contrastive Bidirectional Transformer

Model	BLEU-4	METEOR	ROUGE-L	CIDEr
SOTA w/o PT [1]	4.38	11.55	27.44	0.38
S3D	3.24	9.52	26.09	0.31
VideoBERT + S3D	4.33	11.94	28.80	0.55
CBT	5.12	12.97	30.44	0.64

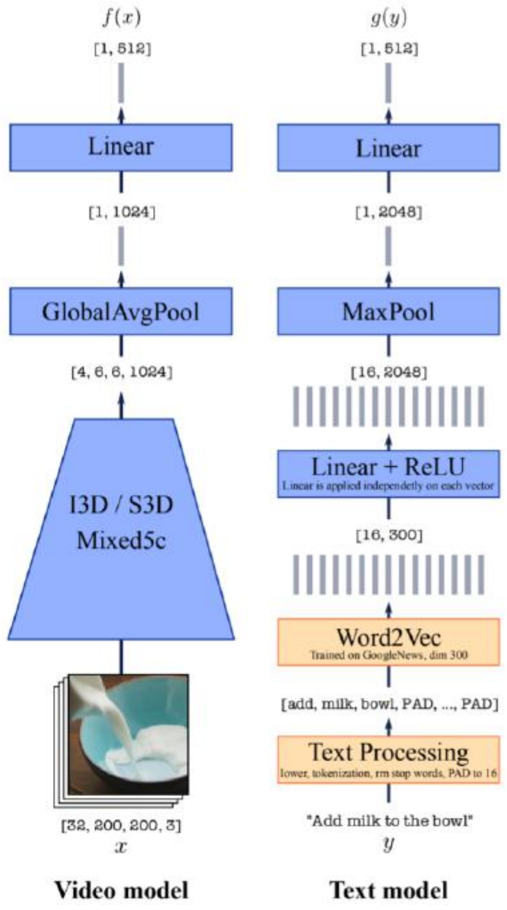
YouCook2 Captioning

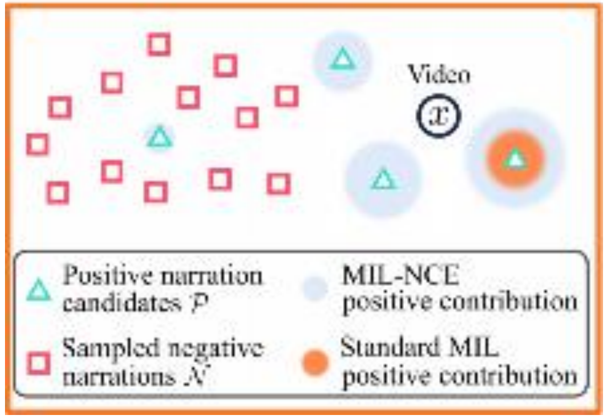
- CBT achieves the new state of the art, as contrastive learning encourages better video representations

[Sun et al., ICCV 2019]

MIL-NCE: End-to-End Learning of Visual Representations from Uncurated Instructional Videos

Pre-training





[Miech et al, CVPR 2020]

Large-scale Pre-training Dataset
- HowTo100M

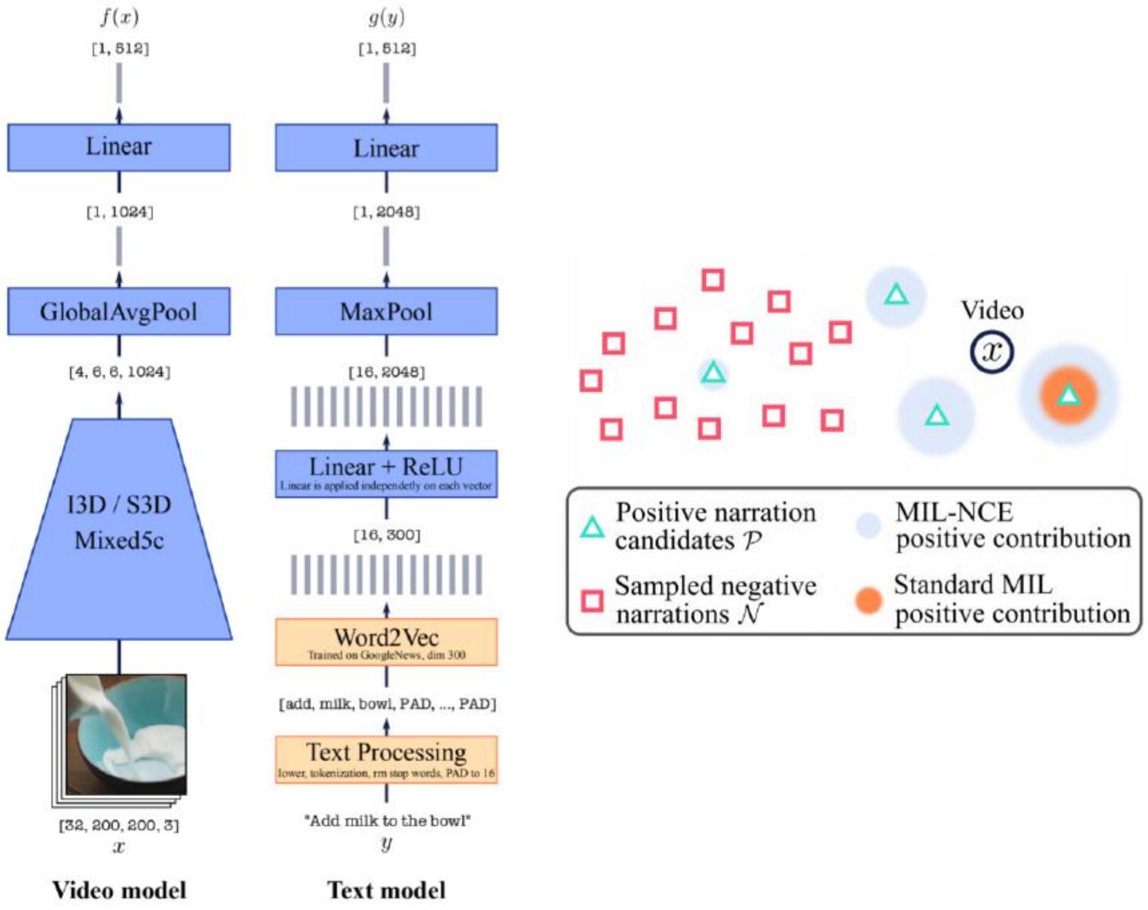
Video Representations
- 3D features from I3D/S3D

Text Representations
- GoogleNews pre-trained word2vec embeddings

Pre-training Joint Embedding
- MIL-NCE pre-training
  - Multiple Instance Learning (MIL)
  - Noise Contrastive Estimation (NCE)

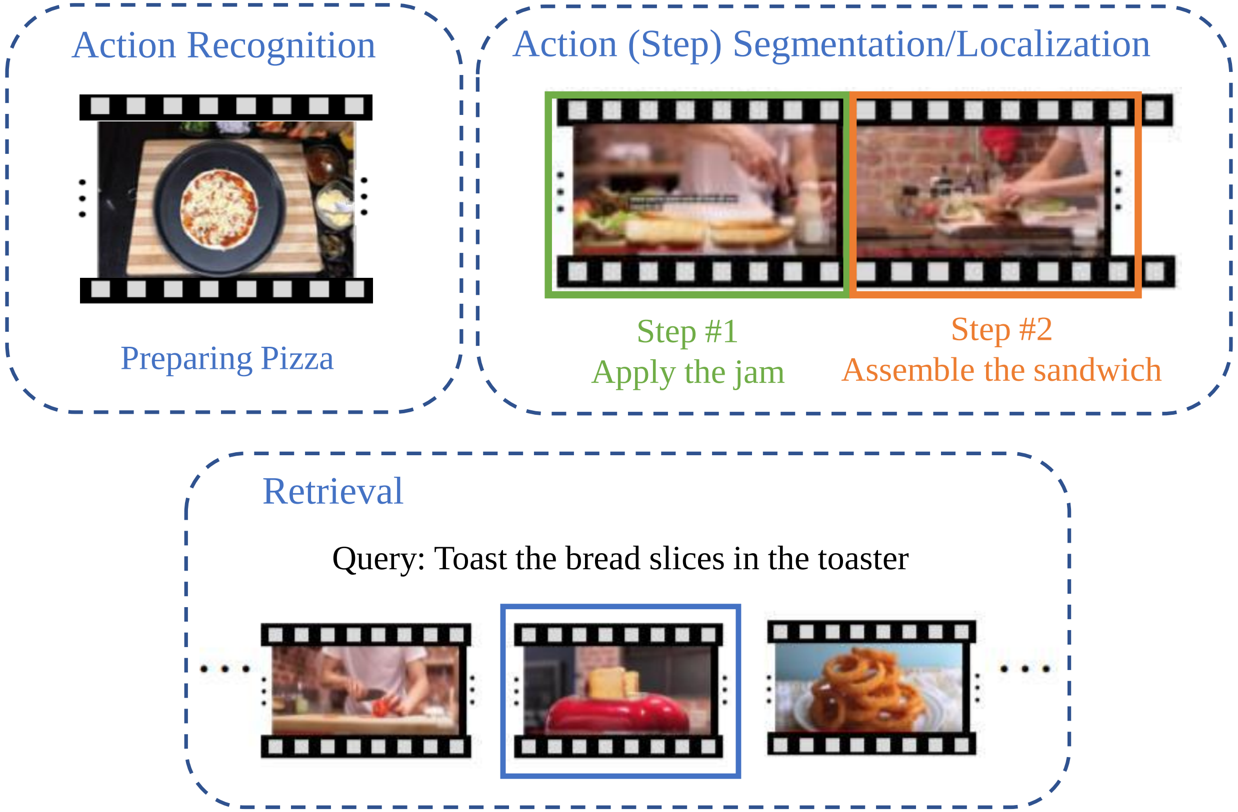
MIL-NCE: End-to-End Learning of Visual Representations from Uncurated Instructional Videos

Pre-training



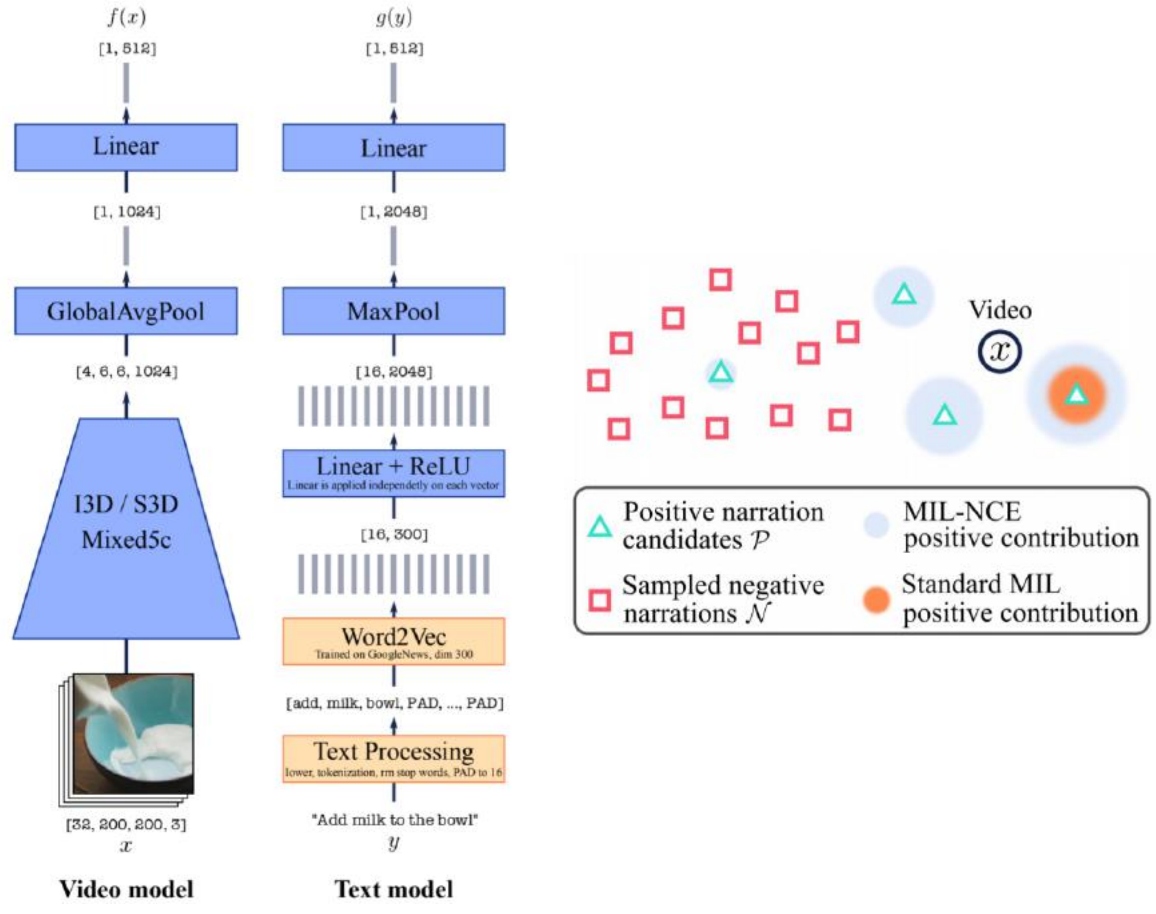
[Miech et al, CVPR 2020]

Downstream Tasks



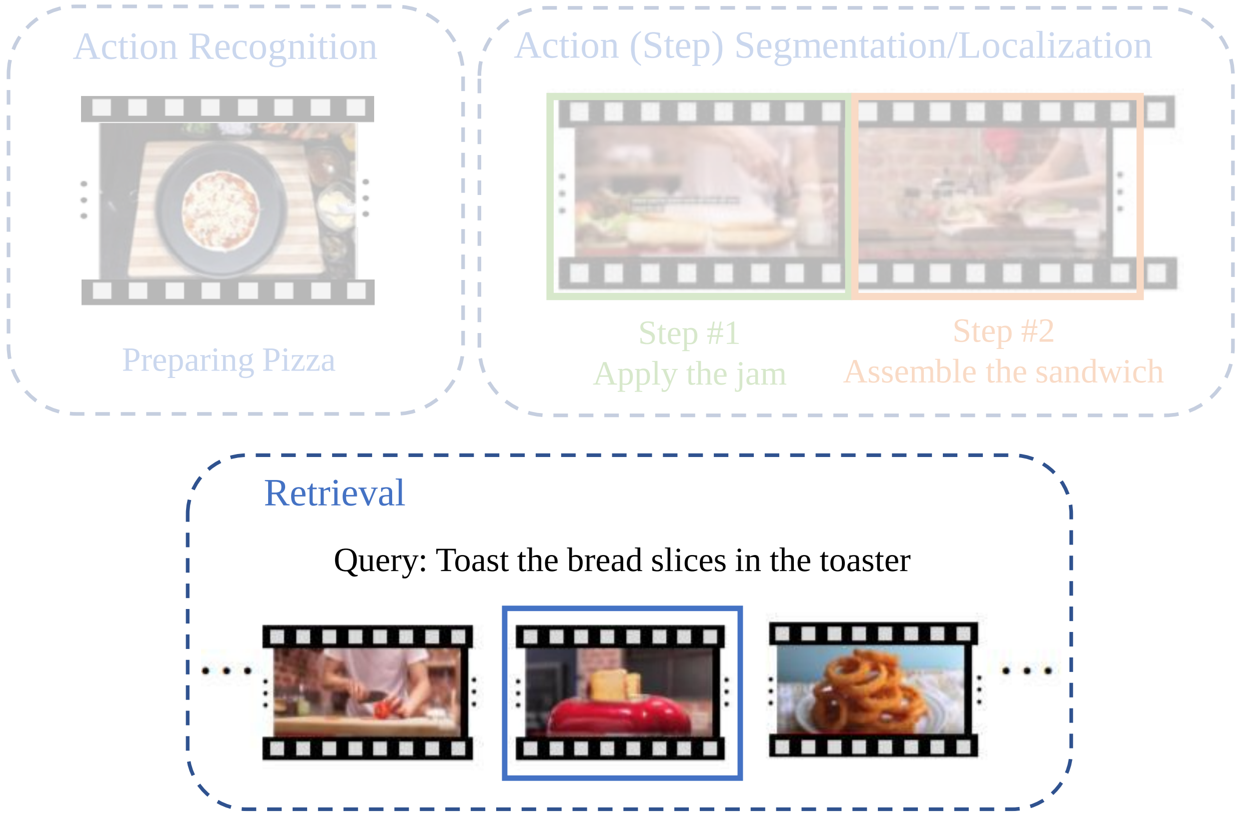
MIL-NCE: End-to-End Learning of Visual Representations from Uncurated Instructional Videos

Pre-training



[Miech et al, CVPR 2020]

Downstream Tasks



MIL-NCE: End-to-End Learning of Visual Representations from Uncurated Instructional Videos

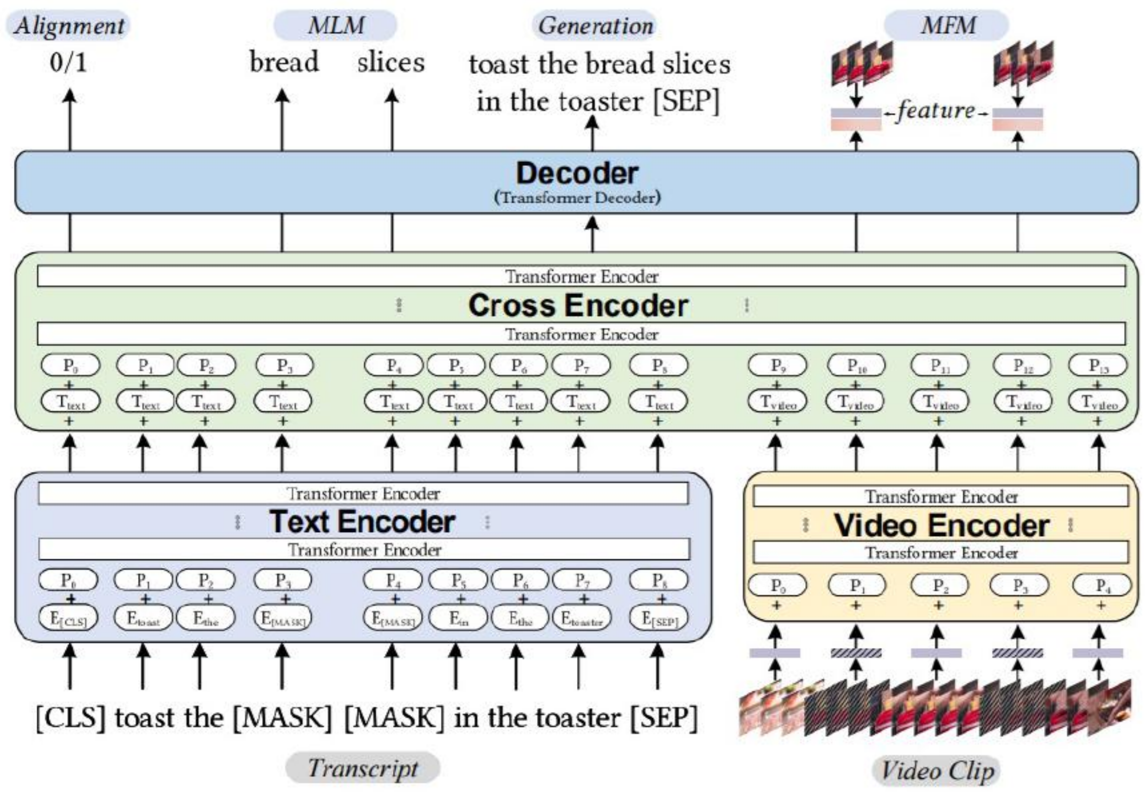
Model	Labeled Dataset Used	YouCook2 (Median R)	MSRVTT (Median R)
HowTo100M	ImageNet + Kinetics400	46	38
	ImageNet + Kinetics400 + YouCook2	24	-
MIL-NCE	None	16	35

Zero-shot Clip Retrieval

- *On both datasets*, MIL-NCE improves over HowTo100M without using any labeled data
- *On YouCook2*, MIL-NCE even surpasses supervised HowTo100M model

UniViLM: a Unified Video and Language pre-training Model for multimodal understanding and generation

Pre-training



Large-scale Pre-training Dataset
- 380K videos from HowTo100M
- All food domain related videos

Video Representations
- 2D features from ImageNet pre-trained ResNet-152
- 3D features from Kinetics pre-trained ResNeXt-101

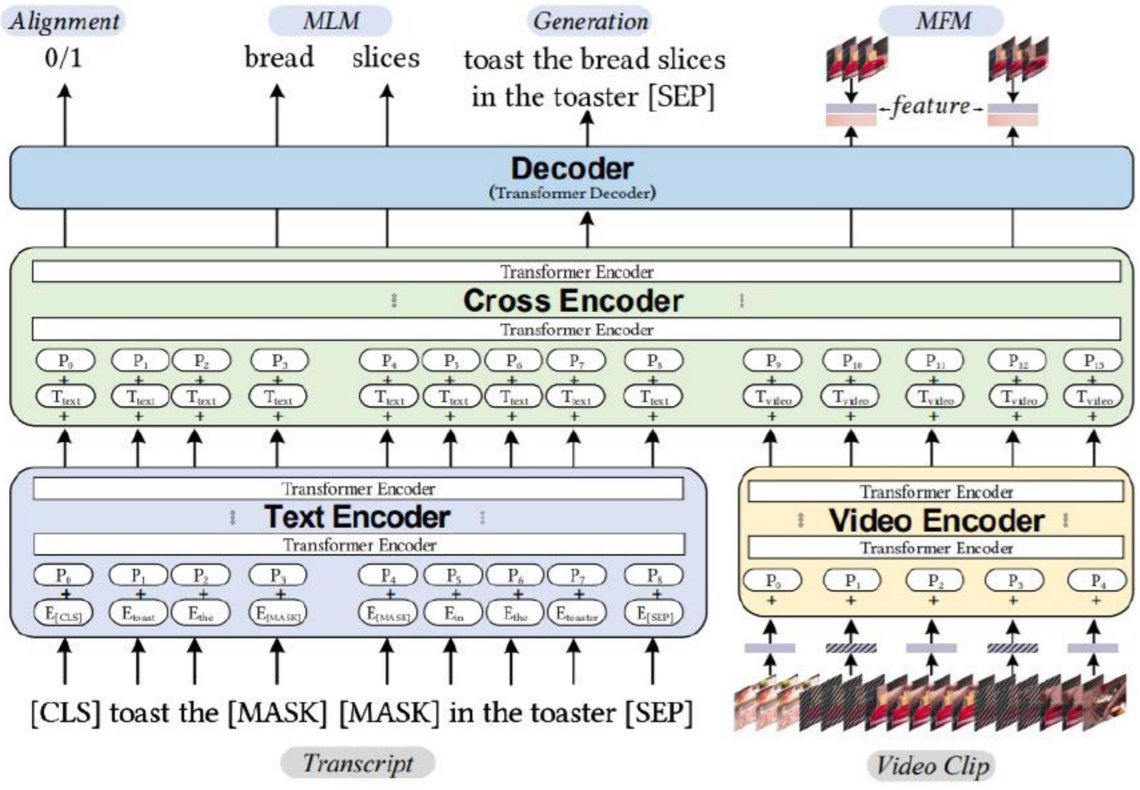
Text Representations
- Tokenized into WordPieces, following BERT

Pre-training Joint Embedding
- Pre-training tasks: MLM + MFM + Video-Text Alignment

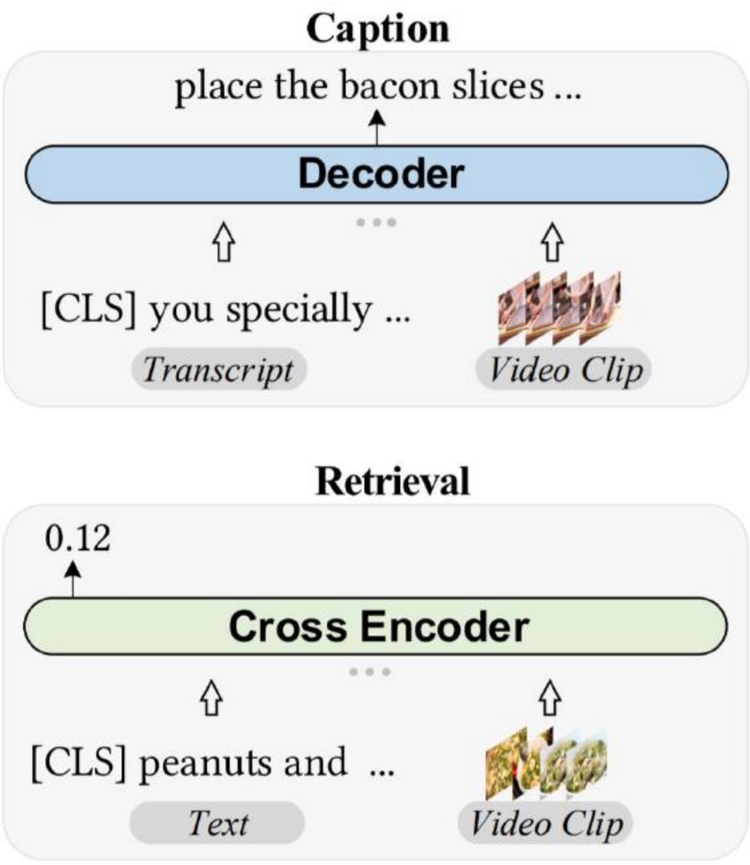
[Luo et al, CVPR 2020]

UniViLM: a Unified Video and Language pre-training Model for multimodal understanding and generation

Pre-training



Downstream Tasks



[Luo et al, CVPR 2020]

UniViLM: a Unified Video and Language pre-training Model for multimodal understanding and generation

Model	Pre-training Data Size	YouCook2 (Median R)	MSRVTT (Median R)
HowTo100M	1.2M	24	9
	380K	25	16
UniViLM	380K	20	9

Clip Retrieval

- *On YouCook2 (in-domain)*, UniViLM improves over HowTo100M with less pre-training data
- *On MSRVTT (out-of-domain)*, UniViLM surpasses HowTo100M with the same amount of pre-training data

Model	Pre-training Data Size	BLEU-4	METEOR	ROUGE-L	CIDEr
SOTA [1]	0	9.01	17.77	36.65	1.12
UniViLM	0	8.67	15.38	35.18	1.00
	380K	10.42	16.93	38.04	1.20

YouCook2 Captioning

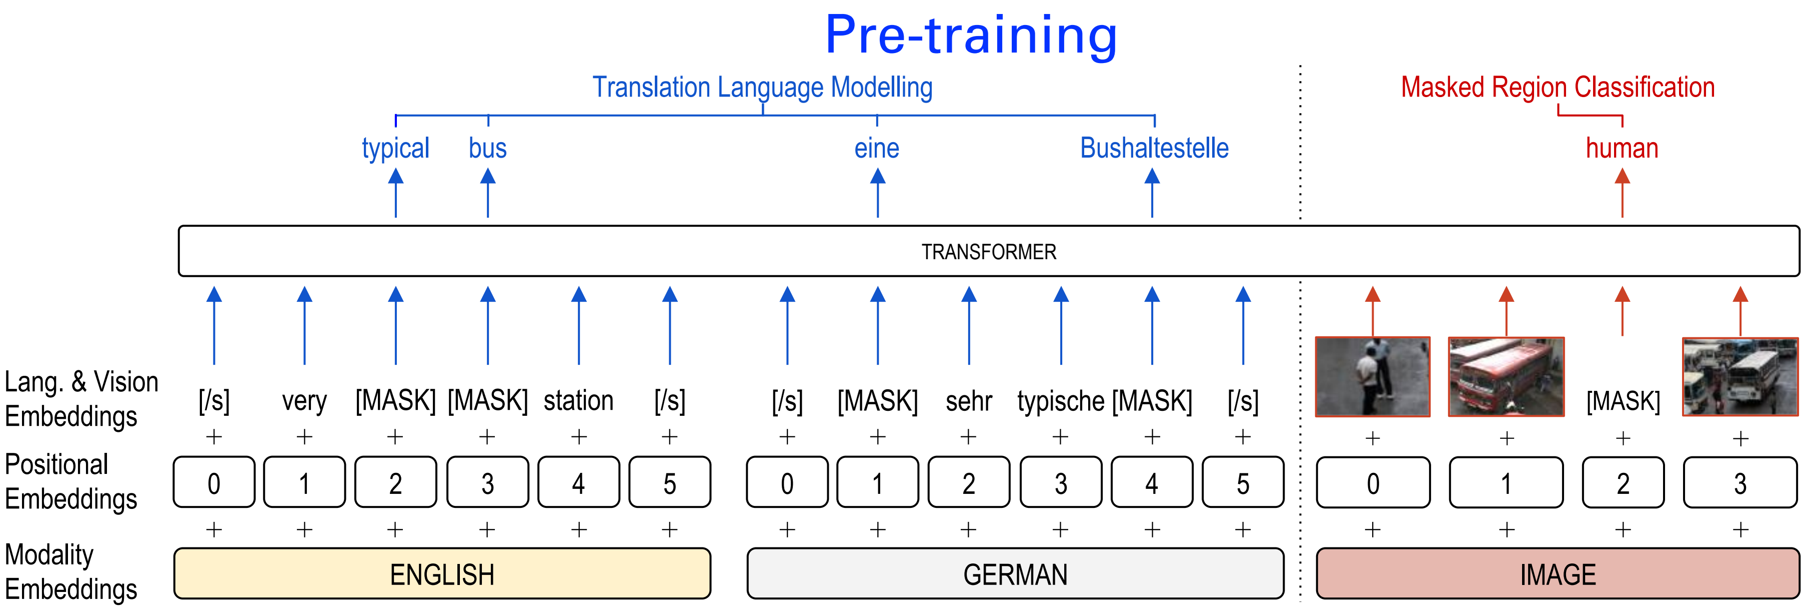
- UniViLM w/o pre-training achieves worse performance
- UniViLM w/ pre-training slightly outperforms SOTA

[1] Shi, Botian, et al. "Dense procedure captioning in narrated instructional videos." ACL 2019

Lecture overview

- Introduction
- Pre-training Data
- Feature Representations for Vision and Language
- Model Architectures
- Pre-training Tasks
- Downstream Tasks
- Moving Forward
  - Self-Supervised Learning for Video + Language
  - **Multilingual Multimodal Pre-training**

VTLM: Cross-lingual Visual Pre-training for Multimodal Machine Translation



Large-scale Pre-training Dataset
- ~3.3M images from Conceptual Captions

Image Representations
- 2D features from Open Images pre-trained Faster R-CNN detections and full image

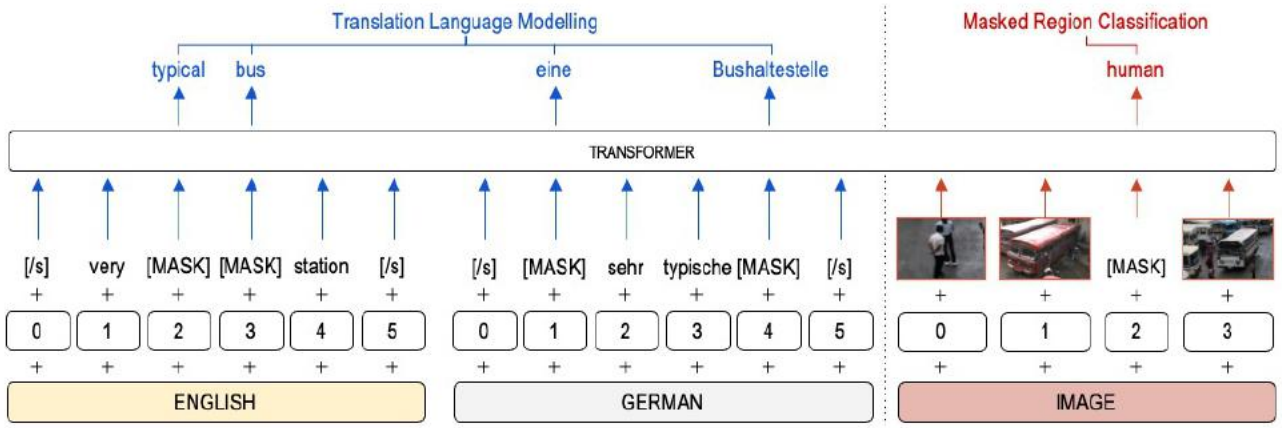
Text Representations
- Tokenized English and German descriptions

Pre-training Joint Embedding
- Pre-training tasks: Translation Language Modeling (TLM) + Masked Region Classification (MRC)

[VTLM; Caglayan et al., 2021]

VTLM: Cross-lingual Visual Pre-training for Multimodal Machine Translation

Pre-training



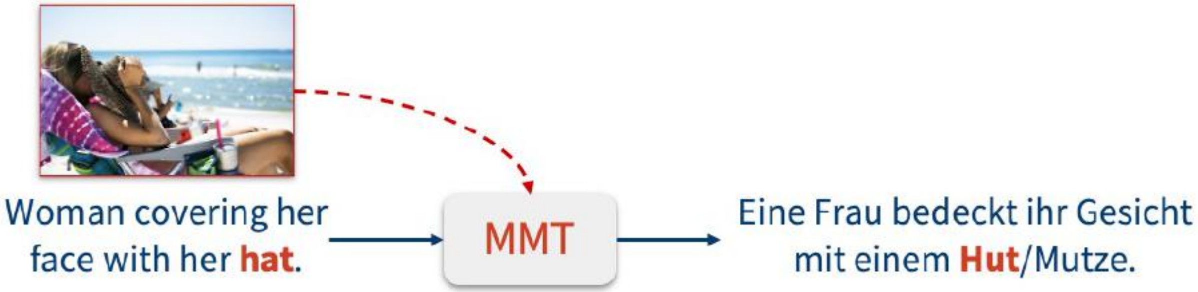
- **Visual TLM (VTLM)** extends TLM by incorporating visual modality alongside the sentence pairs.

$$x = \left[\underbrace{s_1^{(1)}, \cdots, s_m^{(1)}}_{\textbf{Source}\text{ language tokens}}, \underbrace{s_1^{(2)}, \cdots, s_n^{(2)}}_{\textbf{Target}\text{ language tokens}}, \underbrace{v_1, \cdots, v_o}_{\textbf{Region}\text{ features}}\right]$$

[VTLM; Caglayan et al., 2021]

Downstream Tasks

Multimodal Machine Translation (MMT)



- **Goal:** Improve MT quality using auxiliary sources of information
- Image provides contextual cues to resolve linguistic phenomena
  - Word-sense disambiguation, Gender marking
- Fine-tune pre-trained (V)TLMs on Multi30K EN-DE MMT dataset (Elliott et al. 2016).
  - Re-use TLM encoder's weights in the MMT decoder, decrease learning rate.

VTLM: Cross-lingual Visual Pre-training for Multimodal Machine Translation

1. Pre-training on CC boosts all scores upwards substantially
   (pre-training on Multi30k does not, cf. paper)

2. VTLM pre-training helps MMT more than TLM pre-training

3. Interestingly, not masking the visual regions (but keeping the MRC task) yields the best performance

	2016		2017		COCO	
	METEOR	BLEU	METEOR	BLEU	METEOR	BLEU
Best RNN-MMT (Caglayan, 2019)	58.7	39.4	52.9	32.6	-	-
Graph-based Transformers MMT (Yin et al., 2020)	57.6	39.8	51.9	32.2	37.6	28.7
Ensemble RNN-MMT (Delbrouck and Dupont, 2018)	59.6	40.3	-	-	-	-
Unconstrained Transformers MMT (Helcl et al., 2018)	59.1	42.7	-	-	-	-
TLM-MMT: Pre-train on **CC** and Fine-tune on **Multi30k**	60.3	41.9	56.7	37.6	53.3	34.3
	60.2 ± 0.08	41.7 ± 0.18	56.5 ± 0.16	37.5 ± 0.1	53.0 ± 0.2	34.1 ± 0.14
VTLM-MMT: Pre-train on **CC** and Fine-tune on **Multi30k**	60.8	42.7	57.1	**38.1**	53.1	34.2
	60.6 ± 0.15	42.6 ± 0.14	56.9 ± 0.2	37.7 ± 0.43	53.0 ± 0.05	33.9 ± 0.19

	60.9 ± 0.3	43.3 ± 0.6	57.1 ± 0.07	37.6 ± 0.3	53.6 ± 0.17	35.1 ± 0.1

[VTLM; Caglayan et al., 2021]

Conclusion

- Video + Language Pre-training is still at its early stage
  - Video + Language inputs are directly concatenated, losing the temporal alignment
  - Pre-training tasks directly borrowed from Image + Text Pre-training
  - Pre-training datasets limited to narrated instructional videos from YouTube
- Video + Language downstream tasks are relatively “simple”
  - Mostly focus on visual clues only
  - Subtitles/Narrations contain a lot of information, but usually discarded
